*Condominium*, which tends to split up into property in the narrow sense. Westminster Rev., CXXVI. 142.

**condonation** (kōn-dō-nā'shōn), *n.* [= *Sp. condonación = Pg. condonação = It. condonazione, < L. condonatio(n-), < condonare*, pp. *condonatus*, *condone*; see *condone*.] 1. The act of condoning, or of pardoning a wrong act; as, the *condonation* of an offense.

And we teach and believe that when sinners are pardoned by God, God doth not change the mind of the sinner . . . but that the same [sin], remaining in the soul of man, in like manner as it did before *condonation*, is only taken away by a not imputation of the guilt.

Bp. Mountain, Appeal to Caesar, p. 169.

Specifically—2. In *law*, the act or course of conduct by which a husband or a wife is held to have pardoned a matrimonial offense committed by the other, as the taking back of his wife by a husband, knowing that she has committed adultery. To have this effect, the conduct must be such as to imply intentional and voluntary remission.

*Condonation* is the remission, by one of the married parties, of a matrimonial offense which he knows the other has committed, on the condition implied by the law that the party remitting it shall afterward be treated by the other with conjugal kindness.

Bishop, Marriage and Divorce, II. § 33.

The immediate effect of *condonation* is to bar the party condoning of his or her remedy for the offence in question.

**condone** (kōn-dōn'), *v. t.*; pret. and pp. *condoned*, pp. *condoning*. [= *OF. condonier, condanner, condonner, condanar*, permit, suffer, pardon, = *Sp. Pg. condonar = It. condonare, < L. condonare*, give, give up, remit, refrain from punishing, *< com-* + *donare*, give; see *donate*.] 1. To forgive or pardon, as something wrong, especially by implication, as through some act of friendship or confidence toward the offender; overlook, as an offense or fault.

*Condone*, an old legal technicality, has of late received a popular welcome, as a stately euphemism for 'pardon' or 'overlook.'

F. Hall, Mod. Eng. (ed. 1873), p. 239.

War was rather *condoned* than considered, and whatever might be the case with a few isolated prelates, the Church did nothing to increase or encourage it.

Lerky, Europ. Morals, II. 205.

We are not to assume that every offence might be *condoned* for a certain sum in money.

C. H. Pearson, Early and Mid. Ages of Eng., xxviii.

**condor** (kōn'dor), *n.* [= *D. G. Sw. condor* = *Dan. kondor* = *F. condor*, formerly *condore* = *It. condore*, *< Sp. Pg. condor*, *< Peruv. cuntar*, a condor.] 1. A very large South American bird of prey, *Sarcophagus gryphus*, of the family *Cathartidae* or American vultures, having the head and upper part of the neck naked and largely carunculate, an exposed ruff of downy white feathers round the neck, and the general plumage blackish, varied with much white in the wings. The size of the condor has been greatly exaggerated; it is not known to exceed 9 feet in stretch of wings, and is little over 3 feet in total length. The bird inhabits chiefly the Andean regions, at elevations of from 10,000 to 15,000 feet above the sea, where it breeds, making no nest, but laying its eggs on the bare rocks. Condors are never seen in large companies, but in groups of three or four, and descend to the plain only when impelled by hunger. At such times two of them will successfully attack sheep, goats, deer, etc., though as a rule they prefer carrion.

2. A South American gold coin. That of Ecuador and Colombia is worth \$9.647; that of Chili, \$9.123.—California condor, the large vulture of California, *Cathartes or Pseudogryphus californianus*, resembling the Andean condor and fully as large, with the head and beak differently shaped and not carunculate, no downy collar, much less white on the wings, and the plumage of the breast of peculiar texture.

It is distinguished from convection, by which heat and electricity are carried by moving particles; from the radiation of heat, which does not raise the temperature of the intermediate points (except so far as the radiation is hindered); and from the discharge and the electrolytic transfer of electricity.

**conductitious** (kon-duk-tish'us), *a.* [< L. *conductitiis*, prop. *-iciis*, pertaining to hire, < *conductus*, pp. of *conducere*, hire: see *conduce*.] Hired; employed for wages.

**conductivity** (kon-duk-tiv'i-ti), *n.* [< *conductive* + *-ity*.] In *physics*, the power of conducting heat, electricity, or sound; the property of being *conductive*. In the case of heat (thermal conductivity) solids have in general a much higher degree of conductivity than liquids, and liquids than gases, the last being practically destitute of *conductive* power; both liquids and gases become heated by convection (which see), not by conduction. Furthermore, among solids the conductivity of metals for heat is greater than that of stony bodies, that of animal and vegetable substances being the least of all. Metals have also a relatively high degree of conductivity for electricity, a charge of electricity distributing itself freely over a metallic surface, and an electrical current passing more or less readily through a metallic wire. Those metals which are the best conductors of heat, as silver, copper, and gold, are also the best electrical conductors. The conductivity of many solids (glass, sulphur, resin) is nearly zero for electricity; the same is true to a less degree of most liquids and also of gases. With any substance the conductivity for electricity is the reciprocal of the resistance. See *resistance*.

*Conductivity* varies not only with varying temperature, but also with varying tension, torsion, or pressure. A. Daniell, *Prin. of Physics*, p. 564.

Péclet . . . employs as the unit of *conductivity* the transmission, in one second, through a plate a metre square and a millimetre thick, of as much heat as will raise a cubic decimetre (strictly a kilogramme) of water one degree. J. D. Everett, *Units and Phys. Constants*, p. 101.

2. An aggregate or body of confederates, or of confederated states; the persons or states united by a league.

Although it [the canton of Zug] is a free republic, it is rather a confederation of four or five republics, each of which has its monarchical, aristocratical, and democratical branches, than a simple democracy.

J. Adams, *Works*, IV, 321.

A confederation is a union, more or less complete, of two or more states which before were independent.

Woolsey, *Introduct. to Inter. Law*, § 104.

**Articles of Confederation**, in *U. S. hist.*, the compact or constitution adopted by the Continental Congress in 1777 and ratified by the separate colonies within the next four years. The government formed under this compact, which went into effect on March 1st, 1781, was without an executive and judiciary, consisting simply of a congress of one house, in which each State had one vote; it was empowered to declare war and peace, make treaties with foreign powers, direct the land and naval forces in time of war, make requisitions upon the separate States for their quota of the money necessary for national expenses, regulate the value of coin, control the postal service, etc. As it had no power to enforce its laws upon the States, it soon fell into contempt, and on March 4th, 1789, expired by limitation under the provisions of the present Constitution.—**New England Confederation**, the union effected by the colonies of Massachusetts Bay, Plymouth, Connecticut, and New Haven in 1643, suggested by the need of a common defense against the Dutch and the Indians. It was discontinued in 1684.—**Syn.** *Confederation, Confederacy, Federation.* A confederation or confederacy is sometimes distinguished from a federation as follows: Both designate a union of distinct states. In a federation, however, the essential sovereignty, as exercised toward foreign countries, is regarded as irrevocably deposited in the hands of the central government, and only a constitutionally limited autonomy in internal matters is retained by the constituent territories; while in a confederation the sovereignty may be conceived as still existing in the constituents and exercised more or less extensively by the general government as delegated agent; a confederacy is regarded as even less permanent than a confederation. Thus, the union of the thirteen colonies before 1789 was a confederation, while the United States since that time have constituted a federation. The above distinction, however, is not strictly adhered to in the ordinary use of these words.

It has become rather difficult to draw any certain line between a congress and a conference. In theory, however, a congress has the power of deciding and concluding, while a conference can only discuss and prepare.

Thus the conferences of Moerdyk and Gertruidenberg simply prepared the way for the treaties of Utrecht, while the congresses of Munster, Aix-la-Chapelle, Rastadt, Erfurt, Prague, Châtillon, Vienna, Laybach, and Verona were all more or less direct in their action and results.

The great confessions of faith of the Protestant Christian church are: the Augsburg Confession (1530), a part of the symbol of the Lutheran Church; the first and second Helvetic confessions (1536 and 1566), symbols of the Reformed churches of Switzerland, the latter being approved by nearly all the Reformed churches of the Continent and of England and Scotland; the Gallican Confession (1559), also called the Confession of Rochelle, prepared by Calvin and his pupil De Chandieu, the symbol of the French Protestant church; the Belgic Confession (1561, revised 1629), the symbol of the Reformed churches in Belgium and the Netherlands, and of the Reformed (Dutch) Church in the United States; the first Scotch Confession (1560) and the second Scotch Confession or the National Covenant (1551), the symbols of the Scotch church before the adoption of the Westminster Confession; the Thirty-nine Articles of the Church of England (1563 and 1571); the American revision of the same (1801), the symbol of the Protestant Episcopal Church in the United States; the Irish Article (1645) and the Lambeth Articles (1595), the symbols of the Church of Ireland; the Canons of the Synod of Dort (1619), at present recognized by the Dutch Church, and by the Reformed (Dutch) Church in the United States; the Westminster Confession (1647), the symbol of the Presbyterian Church in England, and of Scotland (taking the place in Scotland of the so-called Scotch confessions), and, with some alterations, of the Presbyterian Church of America; the Savoy Confession (1658), adopted by the Independents at the Savoy palace, London; the declaration of the Congregational Union of England and Wales (1833), of the Boston (United States) National Council (1855), and of the Oberlin National Council (1871), symbols of Congregational churches; the Articles of Religion (1784) of the Methodist Church; the Confession of 1688, and the New Hampshire Confession (1833), symbols of the Baptist Church. 4. [*ML. confessio(n)-*.] The tomb of a martyr or confessor. If an altar was erected over the grave, the name was extended also to the altar and to the subterranean chamber in which it stood. In later times a basilica was sometimes erected over the chamber; the high altar was placed over the altar on the tomb below, and so this high altar also, and subsequently the entire building, was called a *confession*. Also called *confessional*, and in the

Greek Church *catabasis* or *catabasion*.—**Auricular confession.** See *sacramental confession*, below.—**Confession and avoidance**, in law, the substance of a pleading by which the party admits the allegation of his adversary's pleading to be true, but states some new matter by way of avoiding its legal effect.—**Confession of faith.** See 3. above.—**Confession of judgment**, the acknowledgment of a debt by a debtor before a court or a justice of the peace, etc., on which judgment may be entered and execution issued.—**General confession.** (a) A confession made to a priest of sins committed by the penitent since baptism or since infancy, so far as those sins can be remembered; a confession made in preparation for baptism by one baptized after coming to years of discretion, also before admission to a monastic order. (2) The form of confession in the Communion office.—**Judgment by confession**, a judgment obtained on a confession made to a court or a magistrate, or by the withdrawal of the defense, or against a plaintiff by nolle prosequi.—**Sacramental or auricular confession**, the act or practice of confessing sins to a priest, for the purpose of receiving absolution. At a very early period, for gross apostasy or other public sins, public confession was required as a condition precedent to partaking of the communion. Public confession was gradually abolished in order to prevent scandal and social and legal complications. Auricular confession was first made universally obligatory in the West as a condition of admission to communion by the fourth Lateran Council in A. D. 1215. It is now required in the Roman Catholic Church from all who are conscious of mortal sins, and is regarded as essential to absolution and divine pardon, and a necessary prerequisite to partaking of the communion. Priests are bound in the strongest manner never to disclose a secret thus confided to them. Confession is obligatory in the Orthodox Greek and in the Armenian Church. The Anglican Church differs from the Roman Catholic and the Eastern Church in not making it obligatory, but leaving it to the conscience of the individual.—**Seal of confession**, in the *Rom. Cath.* and in the *Gr. Ch.*, absolute secrecy incumbent on a priest with regard to all private confessions of sins made to him. A similar secrecy is enjoined by the 113th canon of the Church of England. Also called the *seal*, and the *sacramental seal*.

(e) *Eccles.*: (1) A rite whereby baptized persons are admitted to full communion with the church. In the Roman Catholic, Greek, and Anglican churches it consists of the imposition of hands and prayer by a bishop (or in the Greek Church by episcopal authority), preceded in the two former byunction or anointing with chrism. In the first two churches it is regarded as the confirming or strengthening of the grace given in baptism and the bestowal of the gifts of the Spirit. In the Anglican Church, high-churchmen and low-churchmen regard it from different points of view, the latter attaching especial importance to the personal renewal made in it, by the persons confirmed, of the vows taken by others in their name at baptism, while the former believe it to be essentially a sacramental rite, conveying the strengthening power of the Holy Ghost. This rite is believed to be recorded in the New Testament as a laying on of hands following baptism, distinct from ordination, and administered by apostles only. Unction was discontinued in the Anglican Church not long after the Reformation. In the early church confirmation immediately followed baptism, and the Greek Church has always retained this practice; in the West, however, the two have been separated since the thirteenth century by an interval of seven years or more. Formerly confirmation was sometimes allowed to be administered by presbyters if authorized by the bishop; and this is still the case in the Greek Church, where it is administered by priests with chrism consecrated by a bishop. Confirmation is one of the seven great religious rites, distinctively called *sacraments* by the Roman Catholic Church, and *sacraments* or *mysteries* by the Greek. The Anglican formularies mention it as one of "five commonly called sacraments," but do not place these in the same rank with baptism and the Lord's supper as sacraments "ordained of Christ our Lord in the Gospel." (See *sacrament*.) In the Lutheran and Reformed churches the rite is administered by the pastors. Other Protestant denominations reject it.

*Congre*, *conger* (of *congruere*, L., to agree together), a society of booksellers who have a joint stock in trade or agree to print books in copartnership.

*Bailey, 1733.*

In American slang it [*congers*] indicates, according to the same writer [Mr. A. Hall], a company of publishers who keep all the advantages to themselves in a particular book, and shut out their brethren of the trade from such. It has been used in a somewhat similar sense in this country for a long period, as all students of the literary history of the last century know. The fourth edition of Dr. Wells's "Antient and Modern Geography" was published by an association of booksellers who, about 1719, entered into an especial partnership for the purpose of printing some expensive works, and styled themselves "The Printing *Conger*."

mans, the eighth part of the amphora. The standard congius of Vespasian is extant in good preservation. It contains 3.375 liters, or 0.892 of a United States (old wine) gallon. Yet most authorities, on theoretical grounds, suppose a mistake to have been made in the construction of this standard, and that it ought to have contained only 3.275 liters, or 0.855 of a United States gallon. It has also been maintained that the construction of this standard marked an increase of 2 per cent. in the Roman measures of capacity.

They denied the authority of the Bible and the truth of important Christian doctrines, and some of them also the existence of a personal Deity. As they became politically powerful, they were suppressed in Saxony and Bavaria, and continued to exist in Prussia only under great difficulties. There are some of these congregations in the United States.—**Lords of the Congregation**, in *Sent. ch. hist.*, a title given to the chief nobles and gentlemen who signed the Covenant of December 3d, 1557, for liberty of worship. The whole body of adherents was called the *Congregation*, from the frequent recurrence of the word *congregation* in the document. = *Syn.* 4. See *spectator*.

**congregationalism** (kong-grē-gā'shon-əl-izm), *n.* [*< congregational + -ism.*] 1. A system of church government based upon the autonomy of the individual congregation. It embodies three fundamental principles—(1) that it is the right and duty of believers in Jesus Christ in every community to organize for Christian work and worship, and that such an organization is a Christian church; (2) that each such church is by right independent of all external ecclesiastical control, and in any such church all members possess equal ecclesiastical authority; (3) that such churches owe a duty of Christian fellowship and cooperation to one another. This fellowship and cooperation is exercised among those who bear the name of Congregationalists by means of councils, conferences, associations, and associations. The principles of congregationalism are maintained not only by Congregationalists so called, but also by Baptists, Unitarians, Universalists, and some other denominations of Christians, and by many evangelical churches in France, Switzerland, etc.

*Congregationalism* is the democratic form of church order and government; it derives its name from the prominence which it gives to the congregation of Christian believers. It vests all ecclesiastical power (under Christ) in the associated brotherhood of each local church, as an independent body. At the same time it recognizes a fraternal and equal fellowship between these independent churches, which invests each with the right and duty of advice and reproof, and even of the public withdrawal of that fellowship in case the course pursued by another of the sisterhood should demand such action for the preservation of its own purity and consistency. Deriv. *Communitarianism* as a system differs from Independency, which affirms the seat of ecclesiastical power to reside in the brotherhood so zealously as to ignore any check, even of advice, upon its action.

2. [*cap.*] The system of ecclesiastical polity and religious doctrine maintained by the Congregational Church. See *congregationalist*, 2.

**congregationalist** (kong-grē-gā'shon-əl-ist), *n.* [*< congregational + -ist.*] 1. One who holds to the congregational principles of church government. See *congregationalism*, 1. In this sense, *Bap-*

tists, Unitarians, Universalists, some Methodists, and some other denominations of Christians are congregationalists. 2. [*cap.*] One of a denomination of Christians who hold to the congregational principle of church government, to the system of doctrines known as evangelical or orthodox, to the legitimacy of the baptism of infants, and to baptism by sprinkling. The congregationalists of the United States are identical in origin and general principles with the Independents (now also called *Congregationalists*) of Great Britain. They were the predominant religious body in the first settlement of New England, and have thence spread over the United States, especially in the Northern and Middle States. Their churches are independent of one another; their various ecclesiastical assemblies—councils, conferences, associations, associations—possess no ecclesiastical authority, but only a moral power; and they are generally moderate Calvinists in theological doctrines. Their missionary operations are carried on by means of voluntary societies supported by the churches, but only indirectly amenable to them.

**congregationally** (kong-grē-gā'shon-əl-i), *adv.* In a congregational manner; by congregations: as a congregation.

2. The meeting of persons in sexual commerce.

—3. A formal meeting or association of persons having a representative character; an organization or authorized assemblage of persons for the consideration of some special subject or the promotion of some common interest; particularly, in *politics*, an assemblage of envoys, commissioners, or plenipotentiaries representing sovereign powers, or of sovereigns themselves, for the purpose of arranging international affairs: as, the *Congress of Vienna* (1814–15); the *Congress of Paris* (1856). For the distinction between *conference* and *congress*, see *extract under conference*, 2 (a).

4. [*cap.*] The national legislature of the United States. In *U. S. hist.* there have been three differently constituted bodies so named: (a) The *Continental Congress*, representing the thirteen colonies. What is known as the first Continental Congress, with delegates from all the colonies but Georgia, met in Philadelphia September 5th, 1774, and lasted until October 26th, 1774; the second, in which all were represented, met in Philadelphia May 10th, 1775, and adjourned December 12th, 1776; the third met in Baltimore December 20th, 1776, and lasted until the Articles of Confederation went into operation, March 1st, 1781. (b) The *Congress of the Confederation*, representing the States under the Articles of Confederation, March 1st, 1781, to March 4th, 1789. (c) The *Congress of the United States*, which represents both the States and the people under the Constitution, and which met for the first time March 4th, 1789. It consists of two houses, the Senate and House of Representatives (sometimes called the upper and lower houses), and meets at least once every year. The Senate is composed of two members from each State, elected (by its legislature) for a period of six years, one third of them being elected every second year. The number of representatives varies in each State in proportion to the population. (See *apportionment*, 2.) They sit for two years only. The united body, for the two years during which the representatives hold their seats, receives a numerical designation as a single Congress, counting from the first. Thus, the senators and representatives sitting during the period March 4th, 1895, to March 4th, 1897, constituted the 54th Congress. The most important powers of Congress, as enumerated in the Constitution, are: to impose and collect taxes, borrow and coin money, regulate commerce, establish uniform naturalization and bankruptcy laws, declare war, raise armies, maintain a navy, suspend the writ of *habeas corpus*, admit new States, and make all laws necessary to carry these powers into execution. In addition, the Senate confirms or rejects treaties, and nominations to office made by the President.

The substitution of "*Congress*" for "*the legislature of the United States*," requires no explanation. It is a mere change of phraseology.

*Cathoica*, Works, I, 26d.

The upper house of *Congress* is therefore a federal while the lower is a national body, and the government is brought into direct contact with the people without endangering the equal rights of the several states.

2. Specifically, in *math.*, of or pertaining to a cone; as, *conic sections*.—**Conic section** [NL. *sectio*

*conica*, Gr. *κωνική τομή*], a curve formed by the intersection of a plane with a right circular cone. If the plane is more inclined to the axis of the cone than is the side of the cone (fig. 3), the intersection is oval and is called an *ellipse*. The circle is one limit of the ellipse—that, namely, in which the plane becomes perpendicular to the axis of the cone. If the plane is less inclined to the axis of the cone than is the side of the cone, it will also cut the second sheet of

Conic Sections.

The two principal forms are fig. 5, giving the hyperbola, and fig. 3, giving the ellipse. Fig. 4 is the intermediate case, giving the parabola. The degenerate forms of the hyperbola is a pair of straight lines as shown in fig. 1. Fig. 2 shows the circle as a special case of the ellipse having no special relations to the infinitely distant part of the real plane, though it passes through two fixed imaginary points on the line at infinity.

the cone on the other side of the vertex (fig. 5), and the twofold curve thus generated is a *hyperbola*. A particular case of the hyperbola, produced when the plane passes through the vertex of the cone, is that of two intersecting straight lines, called a *degenerate conic*. Intermediate between the ellipse and the hyperbola is the case where the plane is parallel to the side of the cone (fig. 4), and the curve thus produced is a *parabola*. The degenerate form of the ellipse is a point, that of the parabola a straight line. The degenerate forms are not true conics, because they are of the first class, the conics being of the second class.—**Spherical conic section**, a curve produced by the intersection of a sphere with a cone.

**Conical bearing**. See *bearing*.—**Conical gearing**. See *gearing*.—**Conical map-projection**, the projection of the earth first upon a tangent or secant cone with the subsequent development of the cone. The best-known conical projection is Bonne's, used for the map of France. "In constructing a map on this projection, a central meridian and a central parallel are first assumed. A cone, tangent along the central parallel, is then assumed, and the central meridian developed along that generator of the cone which is tangent to it, and the cone is then developed on a tangent plane. The parallel falls into an arc of a circle with its center at the vertex, and the meridian becomes a graduated right line. Concentric circles are then conceived to be traced through points of this meridian at elementary distances along its length. The zones of the sphere lying between the parallels through these points are next conceived to be developed, each between its corresponding parallels. Thus all the parallel zones of the sphere are rolled out on a plane in their true relations to each other and to the central meridian, each having in projection the same width, length, and relation to the neighboring zones as on the spheroidal surface. As there are no openings between consecutive developed elements, the total area is unaltered by the development. Each meridian of the projection is so traced as to cut each parallel in the same point in which it intersected it on the sphere." Craig, *Treatise on Projections*, p. 72.—**Conical point**, in *geom.*, a point on a surface such that every line through it meets the surface in two coincident points.—**Conical pupæ or chrysalides**, in *entom.*, those pupæ or chrysalides which have no angular processes, and are more or less conical in form. **Coniferae** (kō-nif'ē-rē), *n. pl.* [*NL., fem. pl. of L. conifer, cone-bearing; see conifer.*] The principal order of gymnosperms exogens, exceeding every other order in the value of its timber-supply and of its resinous products. It is cosmopolitan, but is especially abundant in temperate and mountainous regions, often forming in the northern hemisphere vast forests. It consists of trees or shrubs, mostly evergreen and resinous, usually with subulate (awl-shaped), needle-shaped, or scale-like rigid leaves, and with monocious or rarely dioecious naked flowers. The male flower consists of an indefinite number of stamens upon a central axis, the anthers being frequently suspended from the under side of a petalate scale. The fertile ament consists of scales bearing naked ovules, and in fruit becomes a dry cone or is fleshy and drupe-like. The embryo has often several cotyledons in a whorl. The wood, as in all gymnosperms, is characterized by having the sides of the cells dotted with what are called bordered pits or discoid markings. The order includes 32 genera and about 300 species, and is divided into the following tribes: (a) *Abietineæ*, bearing cones formed of spirally imbricated two-seeded scales; to this belong the pine, fir, spruce, larch, cedar, etc. (b) *Araucariæ*, with similar cones having one or several seeds to each scale, represented by *Araucaria* and *Agathis* in the southern hemisphere, and by two monotypical genera in China and Japan. (c) *Podocarpeæ*, likewise of the southern hemisphere and eastern Asia. (d) *Taxodiæ*, including the big tree of California (*Sequoia*), the bald cypress (*Taxodium*), and a few species of Australia and Japan. (e) *Cupressinæ*, having cones with decussately opposite scales, or sometimes drupe-like, as the cypress, juniper, arbut-vite, and the North American cedars. (f) *Taxaceæ*, with fruit consisting usually of a single seed surrounded by a fleshy disk or coat. This tribe is by some considered a separate order, and includes the yew (*Taxus*), *Torreya*, the ginkgo of China, and some other small genera of Australia and Australasia. True conifers first appear in the

If four points, A, B, C, D, in a straight line are at such distances that  $\frac{AC}{CB} \div \frac{AD}{DB} = -1$ , then C and D are said to be *harmonic conjugates* with respect to A and B, and vice versa.

2. In *gram.*: (a) The inflection of a verb in its different forms, as voices, moods, tenses, numbers, and persons; a connected scheme of all the derivative forms of a verb. (b) A class of verbs similarly conjugated: as, Latin verbs of the third conjugation. (c) In Hebrew and other Semitic languages, one of several groups of inflections normally formed from the same verb, and expressing a modification of meaning analogous to that found in certain classes of derivative verbs in Indo-European languages, or to the voices of these. [The Latin *conjugatio* is a translation of the Greek *συνζωγία*, properly *derivation*, including inflection as well as formation of new words, but afterward limited to the inflection of verbs, which had previously been called simply *inflection*, or *inflection of verbs* (*κλεις ῥηματων*, *declinatio verborum*).]

4. In *biol.*, a union of two distinct cells for reproduction; a temporary or permanent growing together of two or more individuals or cells, with fusion of their plasmodic substance, as a means of reproduction by germs or spores, or a means of renewing individual capacity to multiply by fission. It is a kind of copulation of the entire bodies of different individuals or cells, with the formation of new nuclei or other form-elements, preparatory to the

ilar to that from which it came. The process is considered a sexual one, though the cells which unite cannot be distinguished as male and female.

The conjugation of the Algae and of some of the simplest animals is the first step towards sexual reproduction.

*Darwin*, Cross and Self Fertilisation, p. 409.

The conjugation of two Infusoria occurs in very different ways, and leads to more or less complete fusion, which, after regeneration of the nucleus, is followed by an increase in the frequency of fission. Paramacium, Stentor, Spirostoma, during conjugation, become connected by their ventral surfaces; other Infusoria, with a flat body like Oxytricha or Chilodon, by their sides; while Eucheles, Halteria, Coleps, join together the anterior extremities of their bodies, giving the appearance of transverse fission. A lateral conjugation also takes place not infrequently in Vorticella, Trichodina, etc., between individuals of unequal size, the smaller one having the appearance of a bud.

2. In *astron.*, the meeting of two or more stars or planets in the same longitude: as, the conjunction of the moon with the sun, or of Jupiter and Saturn. When a planet, as seen from the earth, is in the same direction as the sun, it is said to

be in *conjunction* with the sun. This, however, in the case of an inferior planet, may be either when it passes between the sun and the earth or when it is on the further side of the sun; the former is the *inferior* and the latter the *superior conjunction*. A superior planet can be in conjunction with the sun only when the sun is in a direct line between it and the earth. See *syzygy* and *opposition*.

3. In *gram.*, a connective particle serving to unite clauses of a sentence, or coordinate words in the same sentence or clause, and indicating their relation to one another. There are two principal kinds of conjunctions, *coordinating* and *subordinating*: the former joining clauses of equal order or rank (as, he went and I came); the latter joining a subordinate or dependent clause to that on which it depends (as, I went where he was; he was gone when I came). Most conjunctions are of adverbial origin, and some, as, for instance, *also*, share almost equally the character of both parts of speech. —**Comparative conjunction**, **conditional conjunction**, **copulative conjunction, etc. See the adjectives. —**Ecliptic conjunction**. 1. In *anat.*, the mucous membrane which lines the inner surface of the eyelids and thence is reflected over the front of the eyeball, thus conjoining the lids and the globe of the eye: a contraction of *tunica conjunctiva*. In low vertebrates it is rudimentary and non-secretory, or not to be demonstrated; in the higher vertebrates which have eyelids it is well defined. In birds and many reptiles and mammals it forms a special fold, chiefly constituting the nictitating membrane or third eyelid. It is very delicate where it passes over the cornea, offering no impediment to vision. In snakes which have no eyelids a delicate cuticle continues from the skin over the eye, and is shed with the rest of the cuticle. The membrane is regarded as one of the tunics or coats of the eyeball, like the *tunica sclerotica*, etc. 2. In *entom.*, the membrane uniting two sclerites, or hard parts of the integument, which move freely on each other.

Specifically—**2.** *Eccles.*: (a) The act of conferring upon a priest the powers and authority of a bishop: the rite or ceremony of elevation to the episcopate. In the Roman Catholic, in the Greek and other Oriental churches, and in the Anglican Church, imposition of hands by a bishop for the purpose of making the candidate a bishop is held to be essential to consecration, and the rule is that at least three bishops shall unite in the act, as directed by the fourth canon of the first Council of Nicea, A. It was customary to consecrate each of these crosses with chrism, and to recite a special prayer, and perhaps to incense each one; in some cases the cross was cut subsequently in a place which the officiant had consecrated in this manner. In the Greek

Church three larger crosses are cut upon the altar-slab instead of five, and the pillars supporting the altar also receive crosses. See *altar-board*.

**consecrator** (kon'sē-krā-tor), *n.* [= *F. consecrateur* = *It. consecratore*, *< LL. consecrator*, *< L. consecrare*, pp. *consecratus*, consecrate; see *consecrate*, *v.*] One who consecrates.

Which his grace accepteth, as touching your merits and acquittal, in no less good and thankful part than if ye, finding the disposition of things in more direct state, had consecuted all your pursuits and desires. *Ep. Burnet*, *Records*, ii. 23.

**2.** To overtake or gain by pursuit; attain.

In every [argument concerning religious belief] . . . sooner or later there comes a point where strict logical consecution fails, and where the passage is made from premise to conclusion by an appeal to faith and feeling or some other illogical element. *B. P. Bowen*.

The conception of consecution itself, the shifting function of the infinitive, the oscillation of the leading particle *were* are enough, single or combined, to perplex the student who tries either the analytical or the historical method, or both. *Amer. Jour. Philol.*, VII. 163.

**Consecution month**, in *astron.*, the space between one conjunction of the moon with the sun and another; a lunar month.—**Consecution of tenses.** Same as *sequence of tenses*. See *sequence*.—**Reciprocal consecution**, in *logic*, the relation of two facts either of which implies the other.

Thus, the tangent to a curve at a node is said to meet the curve in three coincident points, of which two are not only coincident, but (what is more than coincident) consecutive. This means that a right line cutting the curve in three points may by a continuous motion be brought into coincidence with the tangent at the node, the three points in this motion running up into one, and the motion of two of them being, at the limit, entirely along the tangent. — **Consecutive poles**, in *magnetism*. See *antipole*. — **Consecutive symptoms**, in *pathol.*, symptoms that appear on the cessation or during the decline of a disease, but which have no direct or evident connection with the primary ailment.

In this paper he [Dr. Carpenter] also extended the idea of reflex nervous function to the centers of sensation and ideation, and enunciated the fundamental notions of "*consensual*" and of "*ideo motor*" action. *Pop. Sci. Mo.*, XXVIII, 540.

**Consensual contract**, in *civil law*, a contract which, though made without the formalities of delivery, writing, or entry in account, was enforceable on the ground that in cases of sale, partnership, agency, and hiring proof of the consent of the parties was enough.

The term *Consensual* merely indicates that the obligation is here annexed at once to the *Consensus*. The *Consensus*, or mutual assent of the parties, is the final and crowning ingredient in the Convention, and it is the special characteristic of agreements falling under one of the four heads of Sale, Partnership, Agency, and Hiring, that, as soon as the assent of the parties has supplied this ingredient, there is at once a *Contract*. The *Consensus* draws with it the obligation, performing, in transactions of the sort specified, the exact functions which are discharged, in other contracts, by the Res or Thing, by the Verba stipulationis, and by the Littera or written entry in a ledger. *Consensual* is therefore a term which does not involve the slightest anomaly, but is exactly analogous to Real, Verbal, and Litteral. *Maione, Ancient Law*, p. 322.

**Consensual motions**, in *physiol.*, two or more simultaneous motions, of which the secondary or more remote are

independent of the will, such as the contraction of the iris when the eye is opened to admit the light.

8. In law, that which a contracting party accepts as an equivalent for a service rendered; the sum or thing given, or service rendered, in exchange for something else, or the sum, thing, or service received in exchange for something; the price of a promise or a transfer of property. This may consist either in a benefit to the promisor or a burden assumed by the promisee, or both. A contract must be mutual, and one side is the consideration of the other. A promise made without any such counter compensation or equivalent may be binding in morals, but the law does not recognize it as a contract nor compel its performance. It is not essential that a consideration be an equivalent in a commercial sense, nor even that it have any commercial value. Even exoneration from a moral obligation which could not be enforced at law may be a consideration for an express promise to perform it; thus, where a debtor, after a legal discharge in bankruptcy or by the statute of limitations, without having paid anything, recognizes his moral obligation to pay, and makes an express promise to do so, the moral obligation is deemed a sufficient consideration to make the promise a legal contract.—**Concurrent consideration**, a consideration received contemporaneously with the making of the promise.—**Executed consideration**, a consideration previously received.—**Executory consideration**, a consideration that was to be received subsequently to the making of the promise.—**Failure of consideration**, resulting worthlessness or inadequacy of a consideration originally apparently good; distinguished from *want of consideration* (which see, below).—**Good consideration**, the natural love or affection, or other adequate motive, on account of which a benefit is conferred without a valuable equivalent. **consonance** (kən'sō-nāns), *n.* [= *F. consonance*, *consonnance*, *OF. consonance*, *consonnance*, also *consonance*, *consonnance* (> *L. consonantia*), = *Pr. Sp. Pg. consonancia* = *It. consonanza*, < *L. consonantia*, < *consonant* (-t-s), pp. of *consonant*, agreeing in sound: see *consonant* and *-ance*.] **1.** Accord or agreement of sounds; specifically, in *music*, a simultaneous combination of two tones that is, by itself, both agreeable and final in effect. The perfect consonances are the unison, the octave, the fifth, and the fourth; the imperfect are the major and minor thirds and the major and minor sixths. The effect of consonances is due to the simplicity of the ratio between the vibration-numbers of their constituent tones. Thus, the ratio of the unison is 1:1; of the octave, 2:1; of the fifth, 3:2; of the fourth, 4:3; of the major sixth, 5:3; of the major third, 4:3; of the minor third, 3:2; of the minor sixth, 5:4. Also called *concord*.

In order that a chord produced by three or more notes may be consonant, it is necessary that the different notes that compose it bear, in respect of the number per second of their vibrations, simple ratios, not only to the fundamental note but also to each other. *Blaserna, Theory of Sound*, p. 101.

**II. n.** An alphabetic element other than a vowel; one of the closer, less resonant and continuous, of the sounds making up a spoken alphabet; an articulate utterance which is combined, to form a syllable, with another opener utterance called a vowel. Consonants are the closer, and vowels the opener, of the sounds that make up the alphabetic scale or system of a language. But there is no absolute line of distinction between the two classes; and the opener of the consonants may be and are used as vowels also. Thus, the same *t*-sound is consonant in *apple*, and vowel in *burden*; and in some languages, as Sanskrit and Polish, *r* is much used as a vowel. On the other hand, *g* and *h* are hardly, if at all, distinguishable from *e* and *o*. Such consonants, as standing near or the boundary between consonant and vowel, are often called *semi-vowels* (also *liquids*). According to their degree of closeness, consonants are divided into *mutes* (or *stops*, or *checks*, or *explosives*), as *b* and *p*, which involve a complete cutting off of the passage of the breath; *fricatives* (*spirants* and *sibilants*, etc.), as *th* and *dh* (F.H.), *f* and *v*, *s* and *z*, in which a rustling or friction of the breath through a nearly closed position of the organs is the conspicuous element; *nasals*, as *m*, *n*, and *ng*, accompanied with admission of the intoned breath to the nose and its resonance there; and *semi-vowel* or *liquid* sounds, as already illustrated. According to the organs used in producing them, they are divided into *labials*, made with the lips, as *p*, *b*, *f*, *v*, *m*; *dentals* or *linguals*, made with the tip of the tongue at or near the teeth, as *t*, *d*, *th*, *dh* (F.H.), *n*; *palatals* or *gutturals*, made with the back of the tongue, as *k*, *g*, *ng*; and some languages have various other classes. Then, according as they are made with simple breath, or with breath vocalized or made sonant in the larynx, they are divided into *surd* or *breathless*, as *p*, *t*, *f*, *s*, etc., and *sonant* or *vowel* or *voiced*, as *b*, *d*, *g*, *z*, etc. (Sometimes wrongly distinguished as *hard* and *soft*, as *strong* and *weak*, as *sharp* and *flat*, and so on). See these various terms, and *syllable*.

An officer of high rank in several of the medieval monarchies. The Lord High Constable of England was the seventh officer of the crown. He had the care of the common peace in deeds of arms and matters of war, being a judge of the court of chivalry, or court of honor. To this officer, and to the earl marshal, belonged the cognizance of contracts touching deeds of arms without the realm, and combats and blazons within the realm. His power was so great, and was often used to such improper ends, that it was abridged by the 13th Richard II., and was afterward forfeited in the person of Edward Stafford, Duke of Buckingham, in the reign of Henry VIII. It has never been granted to any person since that time, except on a particular occasion. The office of Lord High Constable of Scotland is one of great antiquity and dignity. He had formerly the command of the king's armies while in the field, in the absence of the king. He was likewise judge of all crimes or offenses committed within four miles of the king's person, or within the same distance of the parliament or of the privy council, or of any general convention of the states of the kingdom. The office has been hereditary since 1314 in the family of Hay, earls of Erroll, and is expressly reserved in the treaty of union. The Constable of France was the first officer of the kings of France, and ultimately became commander-in-chief of the army and the highest judge in all questions of chivalry and honor. This office was suppressed in 1627. Napoleon reestablished it during a few years, in favor of his brother Louis Bonaparte. The constable of a castle was the keeper or governor of a castle belonging to the king or a great noble. This office was often hereditary; thus, there were constables or hereditary keepers of the Tower, of Normandy, and of the castles of Windsor, Dover, etc.

*Battle of Hachur* (Child's Ballads, VII. 185).

2. An officer chosen to aid in keeping the peace, and to serve legal process in cases of minor importance. In England *constables* of hundreds, or high constables (now in many districts called *chief constables*), are appointed either at quarter-sessions or by the justices of the hundred out of sessions; *petty constables*, or *constables of ridls or tithings*, are annually sworn in the office at quarter-sessions for each parish, upon presentation of the vestry, and are subordinate to the high or chief constables. In the United States the constable is an official of a town or village, elected with the other local officers, or, as a special constable, acting under a temporary appointment. The constable was formerly of much more consequence both in England and the colonies, being the chief executive officer of the parish or town.

The constable was formerly the chief man in the parish, for then the parish was responsible for all robberies committed within its limits if the thieves were not apprehended. . . . But this state of things has long passed away; . . . and although *constables* are in some few instances still appointed, their duties are almost entirely performed by the county police. And it was provided by an Act of 1872 that for the future no parish constable should be appointed unless the County Quarter Session or the Vestry should determine it to be necessary.

*J. Foulsham, Jr.*, How we are Governed, p. 69.

All his victuals, and liquor, and money away;  
And some people think with such haste he began,  
That soon he the *constable* greatly out-ran. *C. Anstey*, New Bath Guide, vii.

A group of fixed stars to which a definite name has been given, but which does not form a part of another named group. See **asterism**. Forty-eight constellations are mentioned in the ancient catalogue of Ptolemy, the majority of which appear to date from 2100 B.C. or earlier. They are distributed as follows: (1) North of the zodiac: *Ursa Minor* (the Little Bear, said to be formed by Thales, probably from the Dragon's wing); *Ursa Major* (the Great Bear, the Wain, or the Plough), *Draco* (the Dragon), *Cepheus*, *Boötes* (the

Bear-keeper or Plowman), Corona Borealis (the Northern Crown), Hercules (in the original the Man Kneeling), Lyra (the Harp), Cygnus (the Swan, in the original the Bird), Cassiopeia (the Lady in the Chair), Perseus, Andromeda (the Charioteer or Waggoner), Ophiuchus or Serpentarius (the Serpent-bearer), Serpens (the Serpent), Sagitta (the Arrow), Aquila or Antinous (the Eagle and Antinous), Delphinus (the Dolphin), Equulus or Equuleus (the Colt or the Horse's Head), Pegasus or Equus (the Horse), Andromeda, Triangulum Boreale (the Northern Triangle). (2) In the zodiac: Aries (the Ram), Taurus (the Bull), Gemini (the Twins), Cancer (the Crab), Leo (the Lion), Virgo (the Virgin), Libra (the Balance), Scorpius or Scorpio (the Scorpion), Sagittarius (the Archer), Capricornus (Capricorn, or the Goat), Aquarius (the Water-bearer), Pisces (the Fishes). (3) South of the zodiac: Cetus (the Whale), Orion, Eridanus or Fluvius (the River Po or the River), Lepus (the Hare), Canis Major (the Great Dog), Canis Minor (the Little Dog), Argo Navis (the Ship Argo), Hydra, Crater (the Cup), Corvus (the Crow or Raven), Centaurus (the Centaur), Lupus (the Wolf), Ara (the Altar), Corona Australis (the Southern Crown), Piscis Australis (the Southern Fish). Corona Borealis (the Hair of Berenice) is an ancient asterism, which was not reckoned as a constellation by Ptolemy. Antinous, mentioned by Ptolemy as part of the constellation Aquila, is said to have been made a separate constellation by Firmicus in the fourth century. Crux (the Crozier or Southern Cross) appears to be mentioned by Dante. The navigators of the sixteenth century added a number of southern constellations. Twelve of these appear in the important star-atlas of Bayer (A. D. 1603), namely: Apus (the Bird of Paradise), Chamaeleon, Dorado (the Goldfish; or Xiphias, the Swordfish), Grus (the Crane), Hydrus (the Watersnake), Indus (the Indian Man), Musca or Apis (the Fly or the Bee), Pavo (the Peacock), Phoenix, Triangulum Australe (the Southern Triangle), the Toucan (also called Anser Americanus), and Volans (the Flying-fish). Columba (the Dove of Noah) was made by Petrus Plancius early in the sixteenth century. Bartschius in 1624 added several constellations, of which Camelopardalis (the Camelopard) and Monoceros (the Unicorn) are retained by modern astronomers. Hevelius in 1659 added Canes Venatici (the Greyhounds), Lacerta (the Lizard), Leo Minor (the Small Lion), Lynx (the Lynx), Scutum Sobieskii (the Shield of Sobieski), Sextans (the Sextant), and Vulpecula et Anser (the Fox and the Goose). Finally, Lacaille in 1752 added Antlia Pneumatica (the Air-pump), Cetus (the Graver), Circinus (the Compass), Fornax (the Furnace), Horologium (the Clock), Mons Mensae (the Table-mountain), Microscopium (the Microscope), Norma (the Quadrant), Octans (the Octant), Equus Pictorius (the Painter's Horse), Reticulum (the Net), Sculptor, and Telescopium (the Telescope). The ancient constellation Argo was broken up by Lacaille into the Stern, the Keel, the Sail, and the Mast. There are, thus, eighty-five constellations now recognized. The names of the constellations are mostly derived from Greek and Roman mythology. The practice of designating by the letters of the Greek alphabet ( $\alpha, \beta, \gamma$ , etc.) the stars which compose each constellation, in the order of their brilliancy, originated with Bayer.

5. Any system of fundamental principles of action; as, the New Testament is the moral constitution of modern society. — *Apostolic Constitutions*. See *Apostolic*. — *British Constitution*, a collective name for the principles of public policy on which the government of the United Kingdom of Great Britain and Ireland is based. It is not formulated in any particular document or set of documents, but is the gradual development of the political intelligence of the English people, as embodied in concessions forced from unwilling sovereigns, in the results of various revolutions, in numerous fundamental enactments of Parliament, and in the established principles of the common law. The character of the government has become increasingly democratic, and the power of the sovereign, great in the time of the Tudors, Stuarts, and earlier, is now much abridged. The controlling force in the movement has been the gradually acquired supremacy of Parliament (now residing almost entirely in the House of Commons) over the executive powers of government, so that the principal function of the sovereign is now that of simple confirmation. The chief monuments of the British Constitution, as a growth of liberal representative government, are the Magna Charta and its successive extensions, the Habeas Corpus Act, and the Bill of Rights, the principles of which have been incorporated in all the written constitutions of the English-speaking race. (See these terms.) — *Constitution coin*, a German coin struck according to the Leipzig rate of exchange, 8 rix-dollars weighing a Cologne mark of silver, 14 lots 4 grains fine, and 133 florins weighing one mark, 12 lots fine. This rate, adopted by some states in 1690, was established throughout the empire from 1738 to 1763. — *Constitution of the United States*, or *Federal Constitution*, the fundamental or organic law of the United States. It was framed by the Constitutional Convention which met in Philadelphia May 25th, 1787, and adjourned September 17th, 1787, and it went into effect March 4th, 1799 (although Washington, the first president under it, was not inaugurated till April 30th), having been ratified by eleven of the thirteen States, the others, North Carolina and Rhode Island, ratifying it November 21st, 1789, and May 20th, 1790, respectively. It is a document comprised in seven original articles and fifteen amendatory articles, or amendments. Of the original articles, the first deals with the legislative body, prescribing the method of election to the House of Representatives and the Senate, the qualifications of members, the methods in which bills shall be passed, and those subjects on which Congress shall be qualified to act; the second relates to the executive department, prescribing the method of election and the qualifications and duties of the President; the third relates to the judicial department, providing for the supreme court and such inferior courts as Congress may think necessary; the fourth deals with the relations between the general government and the separate States, and provides for the admission of new

States; the fifth relates to the power and method of amendment to the Constitution; the sixth, to the national supremacy; and the seventh, to the establishment of the government upon the ratification of the Constitution by nine of the States. The amendments, according to one of the methods provided, were proposed by Congress and ratified by the States. The first twelve were submitted under acts passed in 1789-90, 1793, and 1803; the last three, after the civil war, under acts of 1865, 1868, and 1870. The most important of them are the twelfth, which changed the method of election of President and Vice-president; the thirteenth, which abolished slavery; the fourteenth, which disqualifies any one who has been engaged in rebellion against the government from holding office unless his disqualification be removed by Congress, and prevents the assumption and payment of any debt incurred in aid of rebellion; and the fifteenth, which prohibits the denial to any one of the right to vote because of race, color, or previous condition of servitude. — *Constitutions of Clarendon*, in *Eng. hist.*, certain propositions defining the limits of ecclesiastical and civil jurisdiction, drawn up at the Council of Clarendon, near Salisbury, held by Henry II., A. 2. Beneficial to, or designed to benefit, the physical constitution; as, a *constitutional walk*. — 3. Forming a part of, authorized by, or consistent with the constitution or fundamental organic law of a nation or state. In English law the question whether an act is constitutional turns on its consistency with the spirit and usages of the national polity, and an innovation departing from that standard is not necessarily void. In the United States the question turns on consistency or conformity with the written constitution, and an act in contravention of that is void.

To improve establishments . . . by *constitutional* means. *Bp. Ward, Sermon before the House of Lords.*

Degree of constraint, a one-dimensional geometric condition imposed upon the possible displacement of a body or system of bodies. Thus, if one point of the system be forced to remain on the surface of a given sphere, one degree of constraint is introduced; if one point be fixed, three degrees of constraint are introduced, etc.

**Kinetic constraint,** the condition that a point of a system shall move in a given way. Principle of least constraint, in analytical mech., the principle that, when there are connections between parts of a system, the motion is such as to make the sum of the constraints a minimum.

The maximum and minimum principles have at last assumed their final form in the *Principle of Least Constraint* established by Gauss. According to him, the movements of a system of masses, however the masses may be connected together, take place at every moment in the utmost possible agreement with their free movement, and therefore under the least constraint. As measure of the constraint, is taken the sum of the products of every mass into the square of its departure from free motion. Quoted in *Mind*, IX, 458.

The term *consubstantiation* was employed in the doctrinal controversies of the Reformation by non-Lutheran writers, to designate the Lutheran view of the Saviour's presence in the Holy Supper. The Lutheran Church, however, has never used or accepted this term to express her view, but has always and repeatedly rejected it, and the meaning it conveys, in her official declarations.

They, therefore, err, who say that we believe in impanation, or that Christ is in the bread and wine. And equally groundless is the charge of *consubstantiation*, or the belief that the body and blood of Christ are changed into one substance with the bread and wine. . . . But the Lutheran Church maintains that the Saviour fulfils his promise, and is actually present, especially present in the Holy Supper in a manner not comprehensible to us and not defined in the Scriptures. *Mosheim* (trans.).

The law also includes the tendency of ideas to recall ideas that have immediately preceded them—if there is such an elementary tendency, which is disputed. Contiguity is the most characteristic of the principles of association. It was stated by Aristotle, and was revived by David Hume, who used the word *contiguity* to translate Aristotle's term *συνεχης*.

Here's the scroll,  
The *continent* and summary of my fortune. *Shak.*, M. of V., iii. 2.

2t. That which is contained or comprised: contents; the amount held or that can be held, as by a vessel.

Great vessels into less are emptied never,  
There's a redundancy past their *continent* ever. *Chapman*, Revenge of Bussy d'Ambois, ii. 1.

3. In *phys. geog.*, one of the largest land-masses of the globe. From the most general point of view there are two continental masses, the eastern and the western, the old world and the new world. In breaking these up into lesser divisions, Europe and Asia together naturally constitute one mass, conveniently designated as Eurasia, though each is commonly reckoned a separate continent. Africa, formerly attached to Asia very slightly by the isthmus of Suez, and now artificially severed from it by the Suez canal, forms another continental mass. Australia is regarded by many as a third continental subdivision of the eastern land-mass (or a fourth, reckoning Europe and Asia separately). North and South America form the two great natural subdivi-

sions (also separately called continents) of the western continent, and are hardly more united than were Africa and Asia before the cutting of the Suez canal.

4. [*cap.*] In a special sense, in English literature, the mainland of Europe, as distinguished from the British islands: as, to travel on the *Continent*.

[H.] kindly communicated to her, as is the way with the best bred English on their first arrival "on the *Continent*," all his impressions regarding the sights and persons he had seen.

But th' head fell backward on the *Continent*. *Spenser*, F. Q., III. v. 25.

Weary of solid immess, melt itself  
Into the sea! *Shak.*, 2 Hen. IV., iii. 1.

(b) Inclined to favor a strengthening of the general government and an increase of unity among the colonies.

**Continental climate**, in *phys. geog.*, the climate of a part of a continent, regarded as owing its peculiarities to this fact. Such a climate is subject to great fluctuations of temperature, both diurnal and seasonal. An insular climate, on the other hand, is much more equable. This difference is most marked in the case of a small island remote from all other land, as contrasted with the central portions of a great continental mass like Asia. Places near the sea, but more especially if surrounded by the sea, and in proportion as they are distant from the land, enjoy a more equable or insular climate. At a great distance from the sea, and especially if the land-area is very large, the summer is abnormally hot and the winter proportionally cold, while the difference between the temperatures of night and day is also very marked. The interiors of the continents have in general a smaller rainfall than their edges. — **Continental pronunciation**, or **system of pronunciation**, of Latin and Greek. See *pronunciation*.

**Continental system**, in *modern hist.*, the plan of the emperor Napoleon for excluding the merchandise of England from all parts of the continent of Europe. It was instituted by the decree of Berlin, issued November 21st, 1806, which declared the British islands in a state of blockade, and made prisoners of war all Englishmen found in the territories occupied by France and her allies.

II. *n.* 1. A native or an inhabitant of a continent, specifically of the continent of Europe.

2. In *Amer. hist.*, a soldier of the regular army of the revolted colonies in the war of independence. — Not worth a *continental*, not worth as much as a piece of paper money issued by the Continental Congress in the revolutionary war, and hence, from the depreciation of that money, of little or no value; worthless; good for nothing.

The quaint term "*Continental*" long ago fell into disuse, except in the slang phrase *not worth a Continental*, which referred to the debased condition of our currency at the close of the Revolutionary War.

**continuity** (kon-ti-nū'ti-tē), *n.* [*F. continuité* = *Sp. continuidad* = *Pg. continuidade* = *It. continuità*, *continuitate*, < *L. continuitas* (t-), < *continuus*, continuous; see *continuous*.] **1.** Uninterrupted connection of parts in space or time; uninterruptedness.

To this habit of *continuity* of attention, tracing the first simple idea to its remoter consequences, the philosophical genius owes many of its discoveries.

*I. D. Israeli*, *Lit. Char.*, p. 178.

To break the *continuity* of the land, and afford the easier and readier intercourse of water conveyance.

*D. Webster*, *Speech*, June 5, 1828.

Fire will live in it [vapor of the grotto del Candi] no longer than in water, because it wraps itself . . . about the flame, and by its *continuity* hinders . . . air and nitre from coming to its succour. *Addison*, *Italy*.

**2.** In *math.* and *philos.*, a connection of points (or other elements) as intimate as that of the instants or points of an interval of time; thus, the *continuity* of space consists in this, that a point can move from any one position to any other so that at each instant it shall have a definite and distinct position in space. This statement is not, however, a proper definition of *continuity*, but only an exemplification drawn from time. The old definitions—the fact that adjacent parts have their limits in common (Aristotle), infinite divisibility (Kant), the fact that between any two points there is a third (which is true of the system of rational numbers)—are inadequate. The less satisfactory definition is that of C. Cantor, that continuity is the *perfect concatenation* of a system of points—words which must be understood in special senses. Cantor calls a system of points *concatenated* when any two of them being given, and also any finite distance, however small, it is always possible to find a finite number of other points of the system through which by successive steps, each less than the given distance, it would be possible to proceed from one of the given points to the other. He terms a system of points *perfect* when whatever point not belonging to the system be given, it is possible to find a finite distance so small that there are not an infinite number of points of the system within that distance of the given point. As examples of a concatenated system not perfect, Cantor gives the rational and also the irrational numbers in any interval. As an example of a perfect system not concatenated, he gives all the numbers whose expression in decimals, however far carried out, would contain no figures except 0 and 9.

The simplest of the Concrete Sciences, Astronomy and Geology, yield the idea of *continuity* with great distinctness. I do not mean *continuity* of existence merely; I mean *continuity* of causation; the unceasing production of effect—the never-ending work of every force.

*H. Spencer*, *Study of Sociol.*, p. 322.

The motion of a material particle which has continuous existence in time and space is the type and exemplar of every form of *continuity*.

*Clerk Maxwell*, *Matter and Motion*, Art. xav.

**3.** In *zool.* and *anat.*, that part of a thing which lies between the two ends, as the shaft of a long bone, or its diaphysis, as distinguished from its condyles or epiphyses, or the middle portion of the bill of a bird, as distinguished from the base and apex. (Chiefly an anatomical term, and especially a surgical one; as, the fracture of a bone in its *continuity*.) **Continuity of forms**, in the *Kantian philos.*, the doctrine that if A and B are two concepts such that A includes the whole content of B and more, there will always be a third concept C, such that A includes the whole content of C and more, while C includes the whole content of B and more.—**Equation of continuity**, in *hydrodynamics*, the equation which expresses that any change in the quantity of fluid within any closed surface is, in the absence of sources or sinks within the surface, due to the flow of fluid through the surface. In its differential form the equation is

$$\frac{d\rho}{dt} + \frac{d\rho u}{dx} + \frac{d\rho v}{dy} + \frac{d\rho w}{dz} = 0,$$

where *t* is the time, *ρ* the density, *x, y, z* the rectangular coordinates, and *u, v, w* the corresponding components of the velocity.—**Law of continuity**, the doctrine that continuous changes in conditions will be accompanied by continuous changes in the results. This law was first set forth by Leibnitz in 1687, and employed to show that the properties of the parabola may be deduced from those of the ellipse, the laws of rest from those of motion, etc. Later he declared it applicable to such questions as whether there is an uninterrupted series of species from the highest to the lowest. The doctrine has often been understood as implying that there are no abrupt variations in nature.

From the knowledge of the complete state at any instant of a thing whose motion obeys the *law of continuity*, we can calculate where it was at any past time, and where it will be at any future time. *W. K. Clifford*, *Lectures*, I, 122.

**Solution of continuity**, rupture; separation of parts intimately connected. = *Syn. Continuance*, etc. See *continuation*.

By changes in the form of the land and of climate, marine areas now *continuous* must often have existed within recent times in a far less *continuous* and uniform condition than at present. *Darwin*, *Origin of Species*, p. 169.

It [Carlyle's "History of Frederick the Great"] is a bundle of lively episodes rather than a *continuous* narrative. *Lowell*, *Study Windows*, p. 147.

I am more than I was yesterday. This "more" represents the growth which I said was implied in the very conception of personality, of the *continuous* individual. *S. Lanier*, *The English Novel*, p. 87.

Thus, a stem which has no joints is said to be *continuous*.—**Continuous bearings**, chain of timber laid under the rails of a railroad to then support, in place of stone or wooden sleepers fixed at certain intervals. The chains of timber, or longitudinal sleepers, are secured to cross-timbers fixed to piles. **Continuous brake, girder, impost**, etc. See the nouns. **Continuous function**, a function whose differential coefficient is nowhere infinite, so that an infinitesimal increment of the variable produces an infinitesimal increment in the value of the function.—**Continuous-service certificate**, a certificate issued to enlisted men in the United States navy who reenlist at the expiration of their term of service.—**Continuous voyage**. See *continued voyage*, under *continued*.—**Syn. continuous, incessant, continual**, etc. See *incessant*.

G. H. Lewes, *Probs. of Life and Mind*, II. iii. § 12.

It is interesting to note that all possible sensations of colour, of tone, and of temperature constitute as many groups of qualitative *continua*. II. *n.* A coin or medal having such a circumference: a term applied by numismatists to certain Roman copper pieces, which are characterized by having on each side a circular furrow. They bear on one face a head (of Nero, Trajan, etc.), and on the other a subject generally relating to the games in the circus or amphitheater. They were doubtless issued at Rome in

the fourth and fifth centuries A. D., but their ancient appellation is unknown, and the purpose for which they were employed is uncertain. It has been supposed that they were given as tickets or certificates to successful competitors in the games.

**contorsion**, **contorsionist**. Old spellings of *contortion*, *contortionist*.

**contort** (kon-tōrt'), *v. t.* [*L.* *contortus*, pp. of *contorquere* (> *It.* *contorcere*), twist, < *com-*, together, + *torquere*, twist, turn round; see *tort*, *torture*.] To twist, draw, bend, or wrench out of shape; make crooked or deformed.

When Croft's "Life of Dr. Young" was spoken of as a good imitation of Dr. Johnson's style, "No, no," said he [Burke], "it is not a good imitation of Johnson; it has all his pomp, without his force; it has all the nodosities of the oak, without its strength; it has all the *contortions* of the sylph, without the inspiration."

O. N. Rood, *Modern Chromatics*, p. 311.

(b) In *fort.*, the horizontal outline of works of defense. When the conformation of the ground or works is described by contours or horizontal sections, these sections are taken at some fixed vertical interval from each other suited to the scale of the drawing or the subject in hand; and the distances of the surface, at each interval, above or below some assumed plane of comparison, are given in figures at the most convenient places on the plan. **contour-hair** (kon-tōr'hār), *n.* One of the hairs of the general superficial pelage of a quadruped, which to some extent determines the contour of the animal: distinguished from the hidden under-fur. R. A. Proctor, *Light Science*, p. 280.

**contour-line** (kon-tōr'lin), *n.* In *surv.*, a line joining points of equal elevation on a surface; a line or level carried along the surface of a country or district at a uniform height above the sea-level. When laid down or plotted on a map or plan, such lines show the elevations and depressions of the surface of the ground, the degree of accuracy depending on the number of lines or levels taken. In the maps of the Coast and Geodetic Survey of the United States the contour-lines are generally given for every 20 feet of elevation. It is essential to the completeness of a contour-line that it should be carried on till it returns to the point whence it started, thus describing a closed curve. The littoral contour or outline of the sea forms a natural contour-line. The system of representing the form of the earth's surface by means of horizontal lines at equal vertical distances was probably invented by Philippe Buache in 1744.

*Contour-lines*, eighty feet apart vertically, were run; and intermediate forty-foot contours were interpolated by means of slope-measurements in the steeper parts, and by running curves in the more level portions.

Science, III. 305.

**Contour-line map**, a map in which the elevations are indicated by contour-lines, which may be drawn at any distance apart, according to the scale adopted and the accuracy with which the surveys have been made. Where the slope is steep the lines are more crowded together, and vice versa. This is, on the whole, the most advantageous method of representing topography where the scale adopted is large.

From *L.* *contra*, through *F.*, comes *E.* *counter*, *counter*, *counter*, and *country*, *q. v.*] A Latin adverb and preposition (and prefix), meaning 'against,' 'over against,' 'opposite,' 'in front of,' orig. 'in comparison with': used in the phrase *per contra*, and, abbreviated, in *pro and con*; also in various legal phrases, as *contra bonos mores*; usually as a prefix in words taken from the Latin or Romance languages, or formed analogously in English. In introducing a legal citation it means 'to the contrary.' See *contra*.

**contra-**. [*L.* *contra*, prefix; see *contra*.] A prefix of Latin origin, meaning 'against,' 'over against,' 'opposite'; doublet of *counter-*. See *contra* and *counter-*. **Contraband goods**, such goods as are prohibited to be imported or exported by the laws of a particular kingdom or state, or by the law of nations, or by special treaties. In time of war, arms and munitions of war, and such other articles as may directly aid belligerent operations (called *contraband of war*), are not permitted by one belligerent to be transported by neutrals to the other, but are under the law of nations held to be *contraband* and liable to capture and condemnation.

*Contraband of war* perhaps denoted at first that which a belligerent publicly prohibited the exportation of into his enemy's country, and now those kinds of goods which by the law of nations a neutral cannot send into either of the countries at war without wrong to the other, or which by conventional law the states making a treaty agree to put under this rubric.

*Woodsey*, *Introd. to Inter. Law*, § 178.

What I have said of the proportion of free colored persons to the whites in the District [of Columbia] is from the census of 1860, having no reference to persons called *contrabands*. *Lincoln*, in *Raymond*, p. 326.

**Occasional contraband**, goods treated as *contraband* by a belligerent, upon the pretext or justification that, though not ordinarily *contraband*, they are in effect such by reason of the peculiar circumstances of the occasion; doubtful articles put into the list of *contraband* by a belligerent merely because they are not the product of the exporting country, or because they are intended for a naval or military port, or for similar reasons.

The doctrine of *occasional contraband*, or *contraband* according to circumstances, is not sufficiently established to be regarded as a part of the law of nations.

A *contract* is one of the highest acts of human free will: it is the will bending itself in regard to the future, and surrendering the right to change a certain expressed intention, so that it becomes morally and jurally a wrong to act otherwise; it is the act of two parties in which each or one of the two conveys power over himself to the other, in consideration of something done or to be done by the other.

5. Specifically, in *law*, an interchange of legal rights by agreement. (a) In the most general sense, any agreement or obligation whereby one party becomes bound to another, whether by record or judgment, or by assent, or even impliedly, to do or to omit to do an act. In this sense it is used in contradistinction to obligations arising out of torts or wrongs. (b) The legal obligation resulting from the drawing together of minds until they meet in an agreement for the doing or the not doing of an act. In its narrowest use in this sense it implies an agreement where both parties become bound. *Contracts* of this sort are sometimes called *bilateral*, to distinguish them from *unilateral* contracts, which bind but one party. (c) An agreement in which a party undertakes to do or not to do an act. In this sense it includes *unilateral contracts*, such as promissory notes. (d) In the most strict sense, an agreement enforceable by law; an agreement upon sufficient consideration, and in such form, and made under such circumstances, that a breach of it is a good cause of action. In this sense it includes the idea of validity, as distinguished from those contracts which lack some element necessary to constitute a legal obligation. (e) In *civil law*, as defined by modern authors, the union of two or more persons resulting in an accordant declaration of the will, with the object of creating a future obligation between them. In the Pandects the generic word was *conventio*, and the word *contractus* was used for those particular conventions which were accompanied by such formalities as to fall within one of the classes recognized by the law as binding; the other conventions, the recognition of which was of later growth, and which were of imperfect effect, were called *pacta*.—**Accessory contract**, *aleatory contract*, *bare contract*, *commutative contract*, etc. See the adjectives.—**Contract of record**, a contract made and entered of record before a judicial tribunal, as a judgment, recognizance, etc.—**Executed contract**, a contract in respect of which the thing agreed has been done; a contract by or under which the possession of and right to the chose or thing are transferred together, as a deed conveying land.

Contraction also takes place when a gas is condensed to a liquid, and in most cases when a liquid is changed to a solid; there are, however, some exceptions, as water, which expands on solidifying.

Specifically—3. A shortening of a word in pronunciation or in writing; as, can't is a *contraction* of cannot. In writing, contraction takes place, as in pronunciation, primarily by the omission of intermediate letters; but also by writing in a smaller character the last letter above the word contracted, by running two or more letters into one character, by using symbols representing syllables or words, and by the use of initial letters; as, *recd.* for *received*; *q'm* for *quoniam*; & for *et*. **Contradiction in terms**, a self-contradictory phrase, as "a square circle."—**Principle of contradiction**, the principle that nothing can be both true and false in the same sense and in the same respects. Modern formal logic demonstrates that this principle enters into a large part of our reasoning, but forms the hinge only of a few very simple inferences (not of direct syllogism). Formerly many logicians regarded the law of contradiction as the governing principle of all demonstrative reasoning. Accordingly, it is often referred to as such without regard to its exact signification. The law was enunciated by Aristotle, but its name was perhaps first given to it by Ramus.

The proposition that no subject can have a predicate which contradicts it is called the *principle of contradiction*. It is a general though negative criterion of all truth.

**Mediate and immediate contraries**, in *logic*, such *contraries*, respectively, as do or do not admit of a third term intermediate between them.

Of *contraries* immediate there is a necessity that one of them should be in a capacious subject. So of necessity every number must be even or odd. Of *mediates*, no necessity for either of them; because the medium itself may occupy the subject; for it is not necessary that a body should be black or white; because it may be red or green.

Burgess, tr. by a Gentleman.

It must not be supposed, that the repose of the two armies was never broken by the sounds of war. More than one rencontre, *on the contrary*, with various fortune, took place.

Pepys, Diary, III, 80.

And first of all, it is worth while to note that properly the word Treaty is applied exclusively to political and commercial objects; while the less pretensions though longer denomination of *Convention* is bestowed on special agreements of all kinds—as, for instance, international arrangements about postage, telegraphs, or literary rights.

Blackwood's Mag.

The same thing is true of treaties of peace as of all other *conventions*, that they are of no validity where the government exceeds its constitutional powers in making them.

J. R. Seeley, Nat. Religion, p. 123.

2. That which is received or established by convention or agreement; a conventional phrase, form, ceremony, etc.; something depending on conventional rules and precepts.

The Franciscans . . . had so far swerved from the obligations of their institute, which interdicted the possession of property of any description, that they owned large estates. . . . Those who indulged in this latitude were called *conventuals*, while the comparatively small num-

her who put the strictest construction on the rule of their order were denominated observants, or brethren of the observance. *Fossatt, Ferd. and Isa., ii. 5.*

**converge** (kon-vér-jé), *v. i.*: pret. and pp. *converged*, ppr. *converging*. [*F. converger* = Sp. (b) The scalar part of the result of performing upon any vector function the operation

$$i \frac{d}{dx} - j \frac{d}{dy} + k \frac{d}{dz}.$$

It is so called because, if the vector function be considered as representing the velocity and direction of a flowing fluid, the surface integral of this function over a closed surface, or the flow inward through that surface, is equal to the volume integral of the convergence within the surface. See *curl*.—**Circle of convergence**, a circle so drawn in the plane whose points represent all imaginary values of the variable that all the points within it represent values for which a given series is convergent, and all points without it represent points for which the series is divergent. But of points on the circumference of the circle, some are generally of one class and some of the other. **Magnetic points of convergence.** See *magnetism*.

**convergent** (kon-vér-jént), *a.* and *n.* [*F. convergent* = Sp. Pg. Thus,

$$1 + x + \frac{x^2}{1.2} + \frac{x^3}{1.2.3} + \frac{x^4}{1.2.3.4} + \frac{x^5}{1.2.3.4.5}$$

Converginerved Leaf.

is a converging series for all values of  $x$ . But

$$x + \frac{1}{2}x^2 + \frac{1}{6}x^3 + \frac{1}{24}x^4 + \frac{1}{120}x^5, \text{ etc.},$$

Thus, the proposition that every isosceles triangle has two of its angles equal is the converse of the proposition that every triangle having two angles equal is isosceles. See *conversion*, 2.

The given proposition is called the converted or converse; the other, into which it is converted, the converting. There is, however, much ambiguity, to say the least of it, in the terms commonly employed by logicians to designate the two propositions—that given, and the product of the logical elaboration.  
*Sir W. Hamilton, Logic, xiv.*

**conversely** (kon'vèrs-ly), *adv.* In a converse manner; as the converse; by conversion. See *converse*<sup>2</sup>, *n.*, and *conversion*.

If, however, from too much conversing with material objects, the soul was gross, and misplaced its satisfaction in the body, it reaped nothing but sorrows.

*Emerson, Essays, 1st ser., p. 164.*

**conversion** (kon-vèr'shon), *n.* [= *F. conversion* = *Pr. conversio* = *Sp. conversión* = *Pg. conversão* = *It. conversione*, *< L. conversio(n-)*, *< convertere*, pp. *convertere*, *convert*: see *convert*, *v.*] 1. In general, a turning or changing from one state or form to another; transmutation; transformation: sometimes implying total loss of identity: as, a conversion of water into ice, or of food into chyle or blood: the conversion of a thing from its original purpose to another; the conversion of land into money.

Specifically—2. In *logic*, that immediate inference which transforms a proposition into another whose subject-term is the predicate-term, and whose predicate-term is the subject-term, of the former. *Simple, proper, or direct conversion* is that in which the quantity and quality of the propositions remain unchanged: as, No good man is unhappy; hence (by conversion), No unhappy man is good. *Conversion per accidens* (by accident) is that in which the quality of the first proposition is unchanged while its quantity is changed: as, All cockatrices are non-existent; hence (by conversion), Some non-existent things are cockatrices. *Conversion by contraposition* is where the quantity and quality are preserved, but the terms are infinitized: as, Some Chinamen are not honest; hence, Some non-honest persons are not Chinamen. The traditional rules of conversion are embodied in the verses,

Simpliciter feci, convertitur e-ra per aeci,  
Astro per contra, sicut conversio tota,

where the vowels of *fecit*, *e-ra*, *astro*, show the kinds of propositions which can be converted in the three ways. (See A1, 2(b).) A *diminutive conversion* is a conversion of a proposition such that the consequent asserts less than the antecedent: as, All lawyers are honest, and therefore some honest men are lawyers. An *improper or reductive conversion* is a conversion per accidens or by contraposition. A *universal conversion* is an inference by conversion whose conclusion is a universal proposition; a *partial conversion*, one whose conclusion is a particular proposition. [The Latin *conversio* was first used in this sense by Apuleius to translate Aristotle's ἀντιστροφή.]

3. In *theol.*, a radical and complete change, sudden or gradual, in the spirit, purpose, and direction of the life, from one of self-seeking and enmity toward God to one of love toward God and man.

*English Gilds (E. E. T. S.), p. 52.*

If we look through all the examples we have of conversion in Scripture, the conversion of the Apostle Paul and the Corinthians, and all others the apostles write to, how far were they from this gradual way of conversion by contracted habits, and by such culture as Turnbull speaks of!  
*Edwards, Works, II. 548.*

**Conversion of St. Paul**, a festival of the Roman Catholic and of the Anglican Church, observed on the 25th of January, in commemoration of the conversion of St. Paul the Apostle, as related in the ninth chapter of Acts.—Syn. 3. **Conversion, Regeneration.** Conversion is generally employed to express the voluntary act of the individual in turning from sin to seek the pardon and grace of God, while regeneration is employed to express the divine act exerted by the Spirit of God on the soul of man. But this distinction is by no means always observed even in theological writings, and the two terms are often used synonymously.

Conversion and repentance, as to souls

See *clinical*. = *Syn.* 1. *Neophyte*. *Convert*, *Proselyte*, *Pervert*, *Apostate*, *Renegade*. A *neophyte* is a convert who is still very new to the doctrine or duties of his religion; hence, figuratively, the word stands for a novice in any line; it does not at all suggest the abandonment of any other faith for the present one. A *convert* may or may not be from some other faith; the word expresses a radical change in convictions, feelings, purposes, and actions, and therefore suggests the sincerity of the subject; it is rarely used with a sinister meaning, but it may mean only acquiescence in a new faith proposed for nominal adherence; as, they were offered the choice of death or becoming *converts* to the faith of the conqueror. A *proselyte* is generally from some other faith or alliance, primarily in religion, but also in partnership of any kind; *proselytism* does not necessarily imply conviction; the tendency is to use only *convert* in the good sense, and apply *proselyte* to one brought over by unworthy motives, and *proselytizer* to one who seeks recruits for his faith without being particular as to their being *converts*, *proselyt* to it. *Pervert* as a noun is new, and confined chiefly to England; it is a paronomasia for *convert*, and a controversial word, stigmatizing one who abandons the Church of England, or one of the other Protestant churches, for the Roman Catholic Church. *Apostate* is a strong term for an utter, conscious, and presumably base renouncer of the Christian religion, or of any denominational, political, or other faith and affiliation. A *renegade* is one who, presumably without conversion of mind or heart, and from sheer interest, goes over from one faith or party to another; hence, a mere runaway or deserter. The term covers as much abhorrence and reprobat

ion as *apostate*, and more contempt.

St. Paul makes a difference between those he calls *neophytes*—that is, newly grafted into Christianity—and those that are brought up in the faith.

3. [*cap.*] An assembly of the clergy of the Church of England for the settlement of certain ecclesiastical affairs. There are two *Convocations*, viz., of the provinces of Canterbury and York, summoned by writs from the crown to the archbishops. Each body contains an upper house of bishops with the archbishop as president, and a lower house, composed of deans, archdeacons, and elected proctors. Constitutions for both *Convocations* were established in the thirteenth century; later an unsuccessful attempt was made to incorporate them with Parliament. In 1533, by the Act of Submission, their legislative powers were restricted, and their acts have since been dependent upon special warrant from the crown. The *Convocation* of Canterbury was the more important and regular; but after its prorogation in 1717, although its meetings were continued for a time, it received no new royal warrant till 1861. The *Convocation* of York has generally been less regular in its proceedings than that of Canterbury. Both *Convocations* now meet at each parliamentary session, and the proctors are renewed at each parliamentary election.

II. *n.* 1. Something of the same order, degree, or rank with another or others.

*Calhoun*, Works, I. 242.

2. In *math.*, a magnitude belonging to a system of magnitudes serving to define the positions of points, lines, planes, or other spatial elements, by reference to a fixed figure; hence, also, a magnitude of a system serving to define the elements of a continuum, in general, as geometrical coördinates do positions in space; thus, the latitude, the longitude, and the height above the mean sea-level are the three coördi-

nates commonly used to define the position of a meteorological station. See *Cartesian*.

Moreover, our various bodily movements and their combinations constitute a network of coördinates, qualitatively distinguishable, but geometrically, so to put it, both redundant and incomplete. *J. B. Ford*, Ensay, Brit., XX. 33.

**Areal coordinates**, a special variety of trilinear coordinates, consisting of the areas of the three triangles having the variable point for a common vertex, and the other vertices two of the three fundamental points. These areas are taken as affected by such algebraical signs as to sum up to the area of the fundamental triangle. **Axes of coördinates**. See *axis*. **Barycentric coordinates**. See *triangular coordinates*, below. **Biangular coordinates**, the two angles PAB and PBA, where P is a variable point in a plane, while A and B are fixed points. Sometimes the cotangents of these angles are taken as the coordinates.

**Bicircular coordinates**, two quantities serving to define the position of any point in a plane by reference to two series of circles which cut one another under a constant angle. There are two principal kinds of bicircular coordinates. In the first kind, a point having been assumed whose coordinates are to be infinite, two lines are drawn through it (commonly at right angles), and all the coördinate circles have their centers on these lines and pass through their intersection. One circle of each of these series passes through the variable point. If *a* is the distance from the point of infinite coordinates at which either of these circles passes through the line of centers of the circles of the same series, the corresponding coordinate is  $A + 1/a$ , where *A* is a constant belonging to this coordinate. In the second kind two fixed points, A and B, are assumed. Then, every circle of one series passes through both the points A and B, while each of the second series has its center on the line AB, and cuts all of the first series orthogonally. One coordinate is the angle at A between the line AB and the circle of the first series passing through the variable point, while the second coordinate is  $P + Q \log(1/a + 1/S)$ , where *S* is the distance from A to the point at which the circle of the second series passing through the variable point cuts the line AB, *S* is the distance AB, and P and Q are arbitrary constants.

**Bilinear coordinates**. (a) Same as *rectangular coordinates*. See below. (b) *Cartesian coordinates*, or *tangential coordinates* based on *Cartesian coordinates*.—**Binary coordinates**, non-homogeneous coordinates of points or lines in a plane.—**Bipunctual coordinates**, coordinates fixing the positions of points or lines in a plane by reference to two fixed points and a fixed direction of measurement. Bipunctual coordinates are of two kinds, line coordinates and point coordinates. Bipunctual line coordinates are the distances of a variable line from two fixed points measured in a constant direction. Bipunctual point coordinates are, each, the negative of the reciprocal of the distance measured in a fixed direction (the same for both coordinates) from one of two fixed points of the line joining the variable point to the other fixed point. In the figure, S and T being the two fixed points, SM and TN are the coordinates of the line MN; and the negatives of their reciprocals are the coordinates of the point P, the intersection of MT and SN.—**Boothian coordinates** [named after their inventor, the English mathematician James Booth], rectangular tangential coordinates. See *tangential coordinates*, below.—**Cartesian coordinates**. See *Cartesian*.—**Curve coordinates**, coordinates defining curves.—**Curvilinear coordinates**, quantities used to define the positions of points on a given curved surface.—**Elliptic coordinates**, a system of coordinates for defining curves upon an ellipsoid by means of the intersections of two systems of confocal hyperboloids.—**Generalized coordinates**, in *analytical mech.*, any system of quantities serving to define the positions of the particles of a system, and treated in a general manner without specifying what they are.—**Homogeneous coordinates**, a system containing one coordinate more than is sufficient for defining the spatial element. One fixed non-homogeneous equation subsists between the coordinates, and every other equation between them is taken as homogeneous. **Ignorance of coordinates**, the leaving out of account of some of the coordinates of a complicated mechanical system; an omission which is permissible under certain circumstances. Thus, in the kinetic theory of gases the coordinates of the individual molecules are not considered.—**Isothermal coordinates**, any pair of quantities serving to define the positions of points in a plane by means of two series of curves cutting one another at right angles.—**Line coordinates**, a homogeneous system of six coordinates fixing the position of a variable line in space.—**Oblique system of coordinates**, in *analytical geom.*, a system in which the coordinate axes are oblique to each other.—**Origin of coordinates**, a point whose coordinates are equal to zero; the intersection of the axes of coordinates.—**Orthotomic coordinates**, a system of three quantities determining the positions of points in space by reference to three series of surfaces cutting one another orthogonally.—**Point or punctual coordinates**, such coordinates as determine the positions of points.—**Polar coordinates in a plane**, a system of coordinates consisting of a radius vector, or the length of a line from the variable point to be defined to a fixed point termed the *origin*, and a vectorial angle, or angle between the radius vector and a fixed line through the origin, called the *initial line*, or *polar axis*. **Polar coordinates in space**, a system of coordinates consisting of a radius vector, a plane vectorial angle, and a dihedral angle. A radius vector and three direction-cosines used to determine the position of points in space are also sometimes called *polar coordinates*.—**Quadrilateral coordinates**, homogeneous point coordinates in space defining a variable point by its distances from four fixed planes, these distances being measured in fixed directions.—**Rectangular coordinates**, a system of quantities serving to determine positions by a reference

Bipunctual Coordinates.

to two axes in a plane, or three in space, which cut one another at right angles. **Rodrigues's coordinates**, a certain system of quantities serving to define the position of a rigid body which has one point fixed. Such a body can be brought from any assumed position to any possible position by means of a rotation round an axis through the fixed point. Three of Rodrigues's coordinates are the direction-cosines of this axis, and the fourth is the angle of rotation. **Spherical coordinates**, quantities analogous to latitude and longitude, used to determine the positions of points on a given sphere. **Tangential coordinates, coordinates defining the positions of lines in a plane or of planes in space. **Tetrahedral coordinates, or *barycentric coordinates in space*, quadrilateral coordinates whose fixed equation is****

$$x + y + z + w = T,$$

*x, y, z, w* being the coordinates. **Triangular or barycentric coordinates**, trilinear coordinates the fixed equation of which is

$$x + y + z = T,$$

where *x, y, z* are the coordinates. **Trilinear coordinates**, a system of homogeneous coordinates defining the positions of points in a plane in which the fixed figure of reference is a triangle, called the fundamental triangle or triangle of reference, and the coordinates are the distances of the variable point from the sides of this triangle measured in three fixed directions.—**Vectorial coordinates**, the distances of a variable point in a plane from two fixed points. Also *bilinear coordinates*.

See *Copaifera*. It has a peculiar aromatic odor, and a bitterish, persistently acrid, and nauseous taste. It consists of an acid resin dissolved in a volatile oil which has the composition and general chemical properties of oil of turpentine, but with a higher boiling-point. **copal** (kō'pal), *n.* [= D. F. Sp. *copal*, *copal* = G. Dan. *kopal*, < Mex. *copalli*, a generic name of resins.] A hard, transparent, amber-like resin, the product of many different tropical trees, melting at a high temperature, and used in the manufacture of varnishes. Some of the softer kinds are also called *anise*. Copal may be dissolved by digestion in linseed-oil, with a heat a little less than sufficient to boil or decompose the oil. This solution diluted with spirit of turpentine forms a beautiful transparent varnish, which, when properly applied and slowly dried, is exceedingly durable and hard. There are various methods of preparing it. The most highly prized copal is that obtained from Zanzibar and Mozambique, the product of leguminous trees, *Trachylobium Hornemannianum* and *T. Mozambicense*, and often dug from the ground in a semi-fossil state. Several varieties are obtained from the western coast of Africa, all probably furnished by species of *Copaifera*. Manila or Indian copal is obtained from *Vateria Indica*. Kauri copal, from New Zealand and New Caledonia, is found in the soil in large masses, the product of species of *Agathis* (*Dumourea*). South American copals are obtained from *Hydnora Coubaril* and other allied leguminous trees, as well as from some burseraceous species. (See *anise*.) The Mexican copal-trees are species of *Bursera* or other genera of the same order. — **Chacaze copal**. See extract.

The raw, or true, copal is called *chacaze*, corrupted by the Zanzibar merchant to jackass copal.

Cf. *coparcener*.] Partnership in inheritance; joint heirship; joint right of succession, or joint succession, to an estate of inheritance in lands. In English law the term is used only of females, because if there are sons the eldest takes the whole estate. In nearly all the United States the word is superseded by its equivalent *tenancy in common*.

As distinguished from the chasuble, the cope is a processional or choral vestment, while the chasuble is sacrificial or eucharistic. In the Church of England the cope was sometimes used instead of the chasuble, and at the time of the Reformation the chasuble itself was often called a cope. The 24th canon of 1603 (still in force) orders the cope to be worn by the celebrant in all cathedral and collegiate churches. It continued to be worn at the altar and at other times till the middle of the eighteenth century, especially in cathedrals, but had fallen gradually more and more into disuse till revived in recent times. A decision of the judicial committee of the Privy Council in 1871 limited its use to that enjoined in the canon of 1603. In England in the middle ages a long open black mantle sewn together in front over the neck and chest was worn by canons, and called the *canon's cope*. See *mandyas* and *pluvial*.

**copyhold** (kop'i-hōld), *n.* [*L. copy* + *hold*.] 1. In England, a tenure of lands of a manor, according to the custom of the manor, and by copy of court-roll; or a tenure for which the tenant has nothing to show except the rolls made by the steward of the lord's court, which contain entries of the admission of the original or former tenant, his surrender to the use of another, or alienation, or his death, and the claim and admission of the heir or devisee. There are two sorts of copyhold: the first is styled *ancient demesne*, or a customary freehold; and the second a *base tenure*, or mere copyhold. Copyhold property can not be now created, for the foundation on which it rests is that the property has been possessed time out of mind by copy of court roll, and that the tenements are with the manor. Copyholds now descend to the heir at law, according to the rules that regulate the descent of all other kinds of estate in land.

[NL.; < *coraco*(id), *coracoid*, + *L. brachium*, arm; see *coracoid* and *brachial*.] A muscle which arises from the coracoid in common with the long head of the biceps, and is inserted into the shaft of the humerus. *II. n.* The distal or ventral element of the scapular arch, extending from the scapula to or toward the sternum, of whatever size, shape, or position; so named from the fact that in adult man it somewhat resembles the beak of a crow in size and shape. See *cut under scapula*. In reptiles, birds, and monotrematous mammals the coracoid is a comparatively large, distinct, and independent bone, articulated at one end with the shoulder-blade and at the other with the sternum. (See *cuts under hypodidym and pectoral*.) In all mammals above the monotremes it is much reduced, becoming a mere process of the scapula, firmly ankylosed therewith and having no connection with the sternum, but normally having an independent center of ossification. In amphibians the coracoid varies in condition and relations, but when present conforms to the above definition. In batrachians the coracoid is divided by a large membranous space or fontanel into a coracoid proper, which lies behind this space, a persistently cartilaginous epicoracoid, which bounds the space internally, and a precoracoid in front of it. In fishes the term *coracoid* has been applied to several different parts, on the assumption of their homology with the coracoid of the higher vertebrates (see *cut under scapulocoracoid*): (a) by Cuvier and his followers, to the teleostomus; (b) by Owen and others, to the preopercula; (c) by Parker and other late writers, to the hypocoracoid; (d) by Gill, to the inner cartilage of the scapular arch and the bones into which it is disintegrated in the higher fishes. See these names, and also *epicoracoid*, *epicoracoid*, *hypercoracoid*, *precoracoid*, *procoracoid*.

*corac* divested of certain non-conformable type. Cf. *Passeres* of Sundevall, and to the *Passeres* of most modern authors. It is an immense assemblage, containing a majority of all birds. They exhibit the typical passerine structure, or the "crow form." Their technical characters are: mesothoracic palate; no basipterygoid processes; a forked manubrium sterni; the sternum single-notched behind and with short costiferous extent (with few exceptions); usually a hypochidum; an accessory scapulohumeral bone; a mobile insistent ladius directed backward; a normal ratio of digital phalanges (2, 3, 4, 5); one enucleated, the left; a synchium presenting every degree of complexity; a nude oil gland; and attershafted plumage. The pectoral arch (of an osseous fish) always consists of a primarily cartilaginous *coraco-scapular* portion, which usually ossifies in two pieces, a coracoid below, and a scapula above—and of sundry membrane bones. Huxley, *Anat. Vert.*, p. 137.

**Coracoscapular angle**, in *ornith.*, the inclination of the axes of the coracoid and of the scapula toward each other. It is normally less than 90°, as in nearly all birds, but in the ratite birds approaches 180°, thus affording one of the strong diagnostic marks of *Ratitae* as compared with *Carnivora*. **Coracoscapular foramen**. See *foramen*.

There are some, not thoughtless persons, who, in enumerating the troublesome and scandalous things that have disturbed us in our New English wilderness, have complained of a crime which they have distinguished by the name of *corahism*, or that litigious and leveling spirit with which the separation has been leavened. C. Mather, *Mag. Chris.*, vii. 1.

A general term for the hard calcareous skeleton secreted by the marine coelenterate polyps for their support and habitation (polypidom). The coral pro-

ducing zoophytes are usually compound animals, young buds sprouting from the body of the parent polyp and remaining connected with it on the same spot even after it is dead, so that a part of a coral may be regarded as the absolute either of one single animal or of a multitude of individuals. The coralline structure sometimes branches like a tree, sometimes spreads like a fan, or assumes the appearance of a brain, a flower, a mushroom, etc. (see cut under *Corallina*). These structures sometimes, as in the Pacific and southern parts of the Indian Ocean, form reefs from 20 yards to several miles in breadth, extending for hundreds of miles along the coasts, and also the peculiar coral islands known as *atolls*. (See *atoll*.) The more abundant reef-builders, at the more

To the rules laid down in *Lev. xxvii*, and *Numb. xxx*, concerning vows, the rabbins added the rule that a man might interdict himself by vow not only from using for himself any particular object, for example food, but also from giving or receiving it. The thing thus interdicted was considered as *corban*. A person might thus release himself from any inconvenient obligation under plea of *corban*—a practice which Christ reprehended, as annulling the spirit of the law.

But ye say, If a man shall say to his father or mother, It is *Corban*, that is to say, a gift, by whatsoever thou mightest be provided by me; he shall be free. *Mark vii*, 11.

The name is derived from the fact that it is made in the form of cords or cylinders by pressing the composition through holes of varying size. The cylinders for heavy guns are made tubular. Cordite imparts high velocity to the projectile without undue pressure, is very stable under extreme climatic conditions, and its baddest properties are not seriously affected by moisture. early origin, though it did not come into favor among the Greeks until comparatively late. The legend of the evolution of the Corinthian capital by Callimachus, in the fifth century B. C., from a calathus (woman's basket) placed on a maiden's tomb and covered with a tile, about which the leaves of a plant of acanthus had grown, is a fable. Among notable Greek examples of the order are the Tholos of Polytechnus at Epidaurus (fifth century B. C.), the choragic monument of Lyciscrates at Athens (335-4 B. C.), and the temple of the Olympian Zeus at Athens, finished by Hædrian. In the larger and richer examples, however, the general disposition only is circular, this form being broken by lobes, cusps, and the like, along which the lights are arranged. The bounding line is usually marked by a broad band of metal, ornamented with repoussé work, enamel, etc., and having sacred texts inscribed upon it; to this band the separate candlesticks are attached. Also called *corona*.—**Corona nuptialis**, a nuptial crown; a crown placed upon the head of a bride or groom at the time of the marriage ceremony. The act or ceremony of investing with a crown, as a sovereign or the consort of a sovereign. The ceremony is generally religious as well as political, and includes the anointing of the sovereign, originally in several parts of the body, and still in a solemn and ceremonious way; the investing with certain garments forming a consecrated dress; the bestowal or assumption of the scepter, sword, and orb; and the placing of the crown upon the head. At different periods in the history of Europe coronation has been essential to entrance upon kingly dignity and power; but where the order of succession is perfectly established, the authority of the new sovereign is considered as beginning with the death of his predecessor, and the coronation is only a ceremonial consecration.

It will be two of the clock ere they come from the coronation.

3. In the *Gr. Ch.*, the sacrament of matrimony; especially, that part of the marriage service which constitutes the nuptials, as distinguished from the preliminary office of betrothal. It is so called because the principal ceremony consists in the priest's placing garlands or crowns on the heads of the bridegroom and bride. In Greece garlands of olive-branches, twined with white and purple ribbon, are used for this purpose; in Russia, metal crowns belonging to the church, and preferably of gold or silver. This ceremony is mentioned by St. Chrysostom and other early Christian writers.

The limits of the family have fluctuated widely, but it is now usually restricted to the corvine birds proper, such as the crows, ravens, rooks, jackdaws, choughs, nutcrackers, magpies, and jays. About 50 genera, with 200 species, have been admitted; they are found in all parts of the world. The leading divisions of the family are the *Corvinæ* and *Garrulinæ*. **Cotingidæ** (kô'tin'ji-dê), *n. pl.* [NL., < *Cotinga* (a) + *-idæ*.] A family of South American passerine birds, proposed by Bonaparte in 1849, of uncertain definition and position, containing the cotingas, manakins, cocks-of-the-rock, bell-birds, fruit-crows, etc. The term is used in varying senses by different authors, and is inconveniently confused with *Pipridæ*, *Amphispizidæ*, *Empidonacidae*, etc. By G. R. Gray (1839) it is made to cover 62 genera and 166 species, divided into 7 subfamilies: *Tyrinina*, *Cotingina* (the cotingas proper), *Lipangina*, *Gymnoderina* (the fruit-crows, as the acranes, arapungas, bell-birds, umbellabirds, etc.), *Piprina* (the manakins proper), *Rupicolina* (cocks-of-the-rock), and *Phytolomina*. The group thus constituted is a highly diversified one, containing many beautiful and interesting forms, characteristic of the South American fauna. In a common usage, *Cotingidæ* are exclusive of the *Pipridæ* and *Phytolomina* as separate families.

**Cotter tenure or system**, a tenure of land by which a laborer rents a portion of land directly from the owner, and the conditions of the contract, especially the amount of rent to be paid, are determined not by custom, but by competition. This system was at one time especially characteristic of Ireland, and is not yet entirely extinct there. The tenure was annual, and the privilege of occupancy was put up at auction, the consequence being excessive competition and exorbitant rents, since the cotter was obliged to get the land at any price in order to live. In an act passed in 1880 to consolidate and amend the law of landlord and tenant in Ireland, cotter tenancies are defined to be cottages with not more than half an acre of land, rented by the month at not more than £5 a year.

The white fibrous substance clothing the seeds of the cotton-plant (*Gossypium*). See cut under *cotton-plant*. It consists of simple delicate tubular hair-like cells, flattened and somewhat twisted. Its commercial value depends upon the length and tenacity of the fiber. It is the clothing material of a large proportion of the human race, its use dating back to a very early period. In commercial importance cotton exceeds all other staples. Great Britain ranks first in the consumption of the raw material, the United States being second, and then France. Cotton consists of nearly pure cellulose, and when acted upon by nitric acid yields a nitro-compound known as gun-cotton, which is a powerful explosive, and when dissolved in ether and alcohol forms collodion. Cotton is very extensively used in the manufacture of thread, and for many purposes in the arts. In surgery it is employed for many purposes, and especially as a dressing for burns, scalds, etc. See *cotton-plant*, *Gossypium*.

In 1700 the importation into England was prohibited, and in 1721 fines were imposed upon the vendors and wearers of cotton, because it was thought to interfere with the home manufacture of woollens and linens. Modern inventions facilitating its manufacture by machinery have built up an immense industry in Europe and the United States. See *cotton-gin*, *spinning-jenny*.

Cotton-gin.

In this the fiber rests upon or against a grid, into the openings of which project the teeth of a gang of saws mounted upon a revolving mandrel. The teeth of the saws catch the fibers and draw them away from the seeds. The latter, being too large to pass through the openings, roll downward and out of the machine. The fibers, removed from the saws by a revolving brush, pass between rollers, and are delivered from the machine in the form of a lap. Other and similar machines have projecting needles, or hooked or covered wire teeth, instead of saws. In the *roller-gin* the fibers are drawn between rollers guarded by blades which prevent the passage of the seeds. Another form has an intermittent action, the fibers being held between nipping blades and the seeds pushed clear from them, fiber and seed being delivered in different directions.

7. In *eccl. hist.*: (a) An assembly of prelates and theologians convened for the purpose of regulating matters of doctrine and discipline in the church. Ecclesiastical councils are *diocesan*, *provincial*, *national*, *general*, or *ecumenical*. A diocesan council is composed of the ecclesiastics of a particular diocese, with the bishop at their head; a provincial or metropolitan council, of the bishops of an ecclesiastical province, with the archbishops at their head; and a national or plenary council, of the bishops and archbishops of all the provinces in the nation. *General council* and *ecumenical council* are ordinarily regarded as equivalent terms, but strictly speaking a general council is one called together by an invitation addressed to the church at large, and claiming to speak in the name of the whole church. Such a council is ecumenical only if received by the Catholic Church in general. None of the general councils most widely accepted as ecumenical consisted of even a majority of orthodox bishops present in person or by deputy. The subsequent consent of the church at large marked them as ecumenical, especially their reception by the next general council held after the first violence of controversy had somewhat abated and opposition had become local in character. Both emperors and popes have summoned general councils. According to Roman Catholic teaching, a council to be regarded as ecumenical must have been called together by the pope, or at least with his consent, and its decrees must be confirmed by the pope. There are seven ecumenical councils recognized as such by both the Greek and Latin or Roman Catholic churches, and to some extent also by some Protestant theologians: they are the first Council of Nice, held in 325; the first Council of Constantinople, 381; the Council of Ephesus, 431; the Council of Chalcedon, 451; the second Council of Constantinople, 553; the third Council of Constantinople, 680; and the second Council of Nice, 787. Other important councils regarded by the Roman Catholic, but not by either the Greek or the Protestant communion, as ecumenical are the Council of Trent (1545–63) and the Council of the Vatican (1869–70). The Anglican Church receives the first six councils. (b) An advisory assembly of clerical or clerical and lay members in certain Reformed denominations.—8. *count*<sup>2</sup> (kount), *n.* [Not in ME. except in fem. form *countess*, *q. v.*; *<* OF. *comte*, *comte*, *F.* *comte* = *Pr.* *coms* = *Sp.* *Pg.* *conde* = *It.* *conte*, *<* L. *comes* (*comit-*), a companion, later a title of office or honor (cf. *constable*), *<* *com-*, together, + *ire*, supine *itum*, *go*, = *Gr.* *iva*, *go*; see *go*.] A title of nobility in France, Italy, Spain, and Portugal (corresponding to *earl* in Great Britain and *graf* in Germany), whence the name *county*, originally applied to the domain appertaining to the holder of such a title. Under the Roman republic a count was a companion or an assistant of a consul or propretor in his foreign government; under the empire, an officer of the imperial household, or an attendant upon the emperor in his official duties, the title being ultimately extended to officers of various grades in different parts of the empire. Among early Teutonic races the count or graf was the officer set by a sovereign over a district or gau, charged with the preservation of the king's authority. In France, under Charles the Bald, a system of government by counts as personal agents of the sovereign was developed. Later, with the growth of the feudal system, they became the feudal proprietors of lands and territories, and thus not merely royal officers, but nobles, and, as such, hereditary rulers. At the present time the title, inherited alike by all the sons of a count or conferred by the sovereign, serves merely to indicate nobility. As a title, *count* does not occur in the nomenclature of the English nobility, except as in *count palatine*; but the feminine form *countess* is the recognized feminine equivalent of *earl*.

The prince, the *count*, . . . and all the gallants of the town, are come. *Shak., Much Ado, iii. 4.*

Shire is a Saxon word signifying a division; but a county, *comitatus*, is plainly derived from *comes*, the *count* of the Franks, that is, the earl or alderman (as the Saxons called him) of the shire. *Blackstone, Com. Int., § 4.*

*Count palatine.* (a) Originally, the judge and highest officer of the German kings, afterward of the German emperors and archdukes; at a later date, an officer delegated by the German emperors to exercise certain imperial privileges. (b) Formerly, in England, the proprietor of a county, who exercised regal prerogatives within his county, in virtue of which he had his own courts of law, appointed judges and law officers, and could pardon murders, treasons, and felonies. All writs and judicial processes proceeded in his name, while the king's writs were of no avail within the palatinate. The Earl of Chester, the Bishop of Durham, and the Duke of Lancaster were the counts palatine of England. The queen is now Duchess and Countess Palatine of Lancaster. The earldom palatinate of Chester, similarly restricted, is vested

in the eldest son of the monarch, or in the monarch himself when there is no Prince of Wales. Durham became a palatinate in the time of William the Conqueror, and the dignity continued in connection with the bishopric till 1836, when it was vested in the crown. See *palatine*, and *county palatine*, under *county*.

**2.** Specifically, an imitation or copy designed to pass as an original. In *law*: (a) A spurious imitation of a thing which has legal value, and fashioned or intended to be used in deceit by passing it as genuine, as a coin made of base metal in the likeness of gold coin, (b) Less strictly, any imitation of such a thing and for such a purpose, as a genuine farthing gilded to pass for a sovereign, or a coin clipped at the edges and then milled, to give it the appearance of a fresh coin, or a fraudulent imitation of a bank-note. It has been held that a bank-note printed from a genuine plate, but having false signatures affixed in imitation of genuine ones, is more appropriately called a *forgery*; that such a note having fictitious or untrue names affixed is more appropriately called *spurious*; and that only a note printed from a false plate is appropriately called a *counterfeit* note. But according to the strictest usage, it would be proper to say, in these several cases, respectively, that the milling was counterfeit, that the false signatures were counterfeit, and that naming the bank falsely with imaginary officers was a counterfeiting; and the better opinion is that a statute prohibiting counterfeiting may be deemed violated if any of the features of the genuine thing is counterfeited so as to serve the false purpose.

3. In *music*: (a) The art of musical composition in general. (b) The art of polyphonic or concerted composition, in distinction from homophonic or melodic composition. (c) Specifically, the art of adding to a given melody, subject, theme, or canto fermo, one or more melodies whose relations to the given melody are fixed by rules. Strict or plain counterpoint, which began to be cultivated in the thirteenth century, and attained great extension and perfection in the fifteenth, is usually divided into several species: (1) *note against note*, in which to each note of the cantus is added one note in the accompanying part or parts; (2) *two against one*, in which to each note of the cantus two notes are added; (3) *four against one*, in which four notes are added; (4) *syncopated*, in which to each note of the cantus one note is added after a constant rhythmic interval; (5) *florid or figured*, in which the added part or parts are variously constructed. The melodic and harmonic intervals permitted in each species are minutely fixed by rule. Counterpoint is *two-part* when two voices or parts are used, *three-part* when three are used, etc. It is *single* when the added part uniformly lies above or below the cantus; *double* when the added part is so constructed as to be usable both above and below the cantus by a uniform transposition of an octave, a tenth, or some other interval; and *triple* when three melodies are so fitted as to be mutually usable above and below one another by transposition. Among the forms of counterpoint, the canon and the fugue are the most important. (See these words.) Next to a pure and natural use of melodic intervals, various kinds of imitation between the voices are specially sought, such as augmentation, diminution, inversion, reversion, etc. (See these words.) The practice of counterpoint was especially prominent in the Gallo-Belgic school of musicians from the thirteenth to the sixteenth century, and it has been a part of musical training and accomplishment ever since. It is a necessary basis for all polyphonic composition, although in modern music the strictness of its early rules has been much relaxed.

L. an escort, company, train, retinue (see *comitatus*), *< comites (comit-)*, a companion, ML. a count; see *count<sup>2</sup>*.] 1. *n.*; *pl.* **counties** (-tiz). 1. (a) Originally, the domain or territory of a count or earl. (b) Now, a definite division of a country or state for political or administrative purposes. In the United States the county is the political unit next below the state (except in Louisiana, which has an analogous division into parishes). Each county has, generally speaking, one or more courts, a sheriff, treasurer, clerk, and various officials engaged in the administration of justice, etc. The number of counties varies greatly in the different states. England has 40 counties (the greater number of which are also called *shires*), Wales 12, Scotland 33, and Ireland 32. For administrative purposes several of the historical counties of England are divided, and the county of London is added, bringing the total for England up to 50. An English county has a lord lieutenant, a custos rotulorum or keeper of records, a sheriff, and other officials. Certain larger British cities are counties in themselves, or counties corporate. Abbreviated Co. or co.

The town and the county have shaped the life of the States of the Union. In this respect there are three classes of States; those in which the town is the political unit, the six States of New England; the second, those in which the county is the unit — the States of the South; the third, those of the "compromise system," as it has been called — a mixed organization of county and township, prevailing in the Middle States and the West.

*Justin Scott, Johns Hopkins Univ. Studies*, III.

2. Collectively, the inhabitants of a county. — **County corporate**, in England and Ireland, a city or town possessing the privilege of being governed by its own sheriffs and other magistrates, irrespective of the county or counties in which it is situated, as Bristol, Newcastle, Dublin, etc. — **County palatine**, in England, formerly, a county distinguished by particular privileges; so called because the owner or holder had royal powers, or the same powers in the administration of justice as the king had in his palace

(see *palatine*); but all such powers are now vested in the crown. The counties palatine in England are Lancaster, Chester, and Durham, which were no doubt made separate regalties on account of their respective proximity to Wales and to that turbulent Northumbrian province which could be accounted a portion neither of England nor of Scotland.

II. *a.* Of or pertaining to a county: as, county families; county society. — **Board of county commissioners**, an elective board to which, in most counties in the United States, the administration of many important affairs of the county is entrusted. In some States it consists of the supervisors of the townships (or towns) comprised within the county. The duties of the board vary in different localities. — **County clerk**. See *clerk*. — **County court**, a court having jurisdiction for a county, usually over actions for a limited amount, and often having some administrative powers, established to facilitate minor litigation. In early English history the county court was a local parliament, containing, in its full session, the archbishops, bishops, abbots, priors, earls, barons, knights, and freeholders, with representatives from each township and each borough. It sat once a month, but these monthly sessions were attended by none but those who had special business, and by the officers of the townships with their qualified jury-men. The existing county courts of England were established under a statute of 1846, each comprising a defined circuit, and sitting usually once a month in each of certain divisions called *county-court districts*. They have jurisdiction for the recovery of small debts, and also certain powers in equity and bankruptcy, and sometimes in admiralty. In the United States each county has a county court for local jurisdiction. In some of the States it is formed by associating all the justices of the peace of the county, and is charged with the administration of county police. See *police*. — **County rates**, in Great Britain and Ireland, rates which are levied upon the county, and collected by the boards of guardians, for the purpose of defraying the expenses to which counties are liable, as repairing bridges, jails, houses of correction, etc. — **County sessions**, in England, the general quarter sessions of the peace for each county, held four times a year. — **County town**, the chief town of a county; a county-seat.

— **Coup de soleil** (ko də sō-lay'), a sunstroke. — **Coup d'état** (ko də tā-tā) (literally, a stroke of state), a sudden decisive measure in politics; a stroke of policy; specifically, an important and usually unlooked-for change in the forms and methods of government, by the ruling power or by a party, effected illegally or by forced interpretation of law, or by violence or intrigue, for the benefit of an individual or a cabal. The principal *coup d'état* in French history, distinctively so called, are that of November 9th, 1799 (18th Brumaire, year VIII., in the republican calendar), when Napoleon Bonaparte forcibly suppressed the Directory, and that of December 2d, 1851, when Louis Napoleon as president broke up the National Assembly by force of arms and made himself temporarily dictator, preparatory to becoming emperor as Napoleon III. a year later.

The news of the *coup d'état* took England by surprise. A shock went through the whole country. Never probably was public opinion more unanimous, for the hour at least, than in condemnation of the stroke of policy ventured on by Louis Napoleon, and the savage manner in which it was carried to success. *J. McCarthy, Hist. Own Times*, xxii.

Singularly enough, the taking of a scalp does not count a *coup*, neither does the killing of an enemy. To count a *coup*, the person must take a bow or weapon or the horse of an enemy, and must have witnesses present to prove it. He must also bring with him the arms by which he counts his *coups*. *Forest and Stream*.

In *pros.*, two lines in immediate succession, usually but not necessarily of the same length, forming a pair, and generally marked as such by rhiming with each other. A pair of lines joined by rime is considered a couplet, whether it forms part of a stanza or constitutes a metrical group by itself. See *distich*.

—4. That which couples or connects, as rafters in a building.

Even to the artificers and builders gave they it, to buy hewn stone, and timber for couplings. 2 Chron. xxxiv. 11.

Specifically—(a) In *music*: (1) A couplet. (2) A couple. (b) The general name for a great variety of mechanical appliances for uniting parts of constructions or parts of machines, for the purpose of adding strength, of transmitting motion from one part to another, or of making a continuous passage, as for a liquid, a gas, or an electric current. A buckle, binding-screw, or fish-plate may illustrate the first; a clevis, a bell-coupling, shaft-coupling, or car-coupling, the second; a pipe-coupling or binding-post, the last. In a narrower sense a coupling is: (1) A device for uniting the ends of shafting, or a coupling-box. (See cut under *coupling-box*.) Such couplings are divided into

two simple classes, those that are fixed permanently on the shafting and those that are adjustable, connected or not at will, and which operate under variations of the power. The first class is called *shifting couplings*. The other class of couplings depend chiefly on friction, the adjustment being such that under a certain load the power is increased, while a sudden addition to the load may exceed the friction and throw the coupling out of operation. (a) A device for uniting two railroad-cars in a train. The form at one time used almost exclusively in the United States and still occasionally employed in freight-cars, is a single link or shackle fitting into jaws at the ends of the draw bar and held in position by pins. This has been superseded on passenger-cars by self-acting couplings, consisting usually of hooked jaws, which slide past each other and are self-locking by means of springs or their own weight. Levers are also used to operate the couplings from the car platform. Also called *coupler*. (b) The part which unites the front and rear axles, or the axle-bolster, of a carriage; the perch or reach. In some carriages the bottom of the carriage forms the only coupling. (c) The space between the tops of the shoulder-blades and the tops of the hip-joints of a dog.

The term denotes the proportionate length of a dog, which is spoken of as short or long in the *couplings*.

*V. Sharr, Book of the Dog.*

**Ball-and-socket coupling.** See *ball*. — **Differential coupling**, an extensible coupling designed for varying the speed of that part of the machinery which is driven.

— **Disk coupling**, a kind of permanent coupling which consists of two disks keyed on the connected ends of the two shafts. In one of the disks there are two recesses, into which two corresponding projections on the

Disk Coupling.

other disk are received, and thus the two disks become locked together. This kind of coupling wants rigidity, and must be supported by a journal on each side, but it possesses the double advantage of being easily adjusted and disconnected. — **Dynamometer coupling.** See *dynamometer*. — **Flexible coupling**, a device for joining pieces of shafting which are not exactly in line, or of which the relative direction is varied in the course of the work, as in a dental engine. It consists of pairs of jointed arms united by universal joints, or of spiral springs fastened at each end to the two pieces of shafting that are to be united, or of plugs or rods of rubber fitted to the shafting.

— **Flexible pipe-coupling**, a pipe-connection consisting of two bell-shaped joints with a short pipe between them, which fits into each bell and enables the two pipes to be laid out of line while yet keeping the joints tight. — **Half-hose coupling**, a coupling which has a sleeve at one end with an internal thread to receive a pipe, while a hose is bound on a corrugated tube-shaped portion at the opposite end. — **Half-lap coupling**, a kind of permanent coupling in which the boss-ends of the connected shafts are made

Half-lap Coupling.

semi-cylindrical, so that they overlap each other. The coupling-box is a plain cylinder bored to fit, and is kept in its place by a parallel key or feather, as shown in the annexed figure. — **Right-and-left coupling**, a turn-buckle. — **Sleeve coupling**, a tube within which the abutting ends of shafting are coupled together.

— **Slip-clutch coupling**, a form of coupling belonging to the class of friction-couplings. It is represented in its best form in the annexed figure. On the shaft B is fixed a pulley, which is embraced by a friction-band A as tightly as may be required. This band is provided with projecting ears, with which the prongs *bb* of a fixed cross *d* on the driving shaft A can be shifted into contact. This cross is free to slide endwise on its shaft, but is connected to it by a sink feather, so that being thrown forward into gear with the ears of the friction-band, the shaft being in motion, the band slips round on its pulley until the friction becomes equal to the resistance, and the pulley gradually attains the same motion as the clutch. The arms and sockets *c, c*, which are keyed fast on the shaft A, are intended to steady and support the prongs, and to remove the strain from the shifting part. — **Square coupling**, in *mill-work*, a kind of permanent coupling of which the coupling-box is made in halves and square, corresponding to the form of the two connected ends of the shafts. The two halves of the box are bolted together on the opposite sides, as

Slip-clutch Coupling.

Square Coupling.

represented in the annexed figure. — **Thimble coupling**, a kind of permanent coupling in which the coupling-box consists of a plain ring of metal, supposed to resemble

Thimble Coupling.

feather bedded in the boss-ends of the shafts, and let into a corresponding groove cut in the thimble. This last is now the more common mode of fitting. This kind of coupling is also known under the names of *ring coupling* and *pin-and-clip coupling*.

**coupling-box** (kup'ling-box), *n.* In *mach.* the box or ring of metal connecting the contiguous ends of two lengths of shaft. See *coupling*, 4.

(b) A designation frequently prescribed by law, particularly in the United States, for a local court in a particular county or city, superior in jurisdiction to the lower class of inferior courts existing in the counties and towns throughout the State; as, the *Superior Court* of the city of New York; the *Superior Court* of Cincinnati; the *Superior Court* of Cook county (Chicago). In Connecticut and Georgia the highest court of original jurisdiction is termed the Superior Court. In Kentucky the name is given to an intermediate court of appeal.—**Supreme Court**, the designation usually prescribed by law for the highest court of the state or nation which has any original jurisdiction of a general nature. In the United States the name is usually given to the court having a general appellate jurisdiction over inferior courts, and original jurisdiction to supervise the proceedings of inferior courts and of public officers, by the special writs of mandamus, certiorari, prohibition, habeas corpus, quo warrant, and the like. The term has no fixed general meaning apart from the statute conferring it. For instance, in many States the jurisdiction of the Supreme Court is purely appellate and supervisory. In England the Supreme Court includes the various divisions, Chancery, Queen's Bench, etc. (formerly called the Superior Courts, which have original and appellate jurisdiction), and the Court of Appeal (which has no original jurisdiction, but reviews the proceedings of the various divisions); and the decisions of the Court of Appeal are in turn reviewed by appeal to the House of Lords. In New York the name is given to the court having general original jurisdiction at law and in equity throughout the State, of all classes of actions, civil and criminal, except such minor, local, and peculiar matters as for reasons of convenience are confined in the first instance to inferior courts; and its final judgments are for the most part subject to review in the Court of Appeals. But it has also appellate jurisdiction over many inferior courts. In New Jersey the Supreme Court has both original and appellate jurisdiction at law, while the equity jurisdiction is vested in the Court of Chancery, and both are subject to review in the Court of Errors and Appeals. In Connecticut the court of general original jurisdiction in law and equity is termed the Superior Court, and the appellate court is termed the Supreme Court of Errors. In Kentucky the term Superior Court is given to an appellate court, whose decisions are in turn reviewed by a Court of Appeals. The Supreme Court of the United States has original jurisdiction in cases affecting ambassadors and other public ministers and consuls, and those in which a State is a party. Its principal business is in the exercise of its appellate jurisdiction, which includes (subject to complex restrictions in many classes of causes) civil cases in the courts established by act of Congress; federal questions determined in State courts of last resort adversely to a claim of federal right; and a supervisory jurisdiction over criminal proceedings in United States circuit courts when two judges are disagreed.—**Surrogate's court**, in some of the United States, a probate court.—**The courts of the Lord**, the temple at Jerusalem; hence, a church or public place of worship.

(afterward James I. of England), and renewed in 1590 and 1596. Its object was the maintenance of the Presbyterian or Reformed religion against popery, and its particular cause was the attempt of Charles I. to force a liturgy upon Scotland. At the restoration of episcopacy in 1662, both the National Covenant and the Solemn League and Covenant of 1643 (see below) were proscribed, and liberty of conscience was not regained until after the revolution of 1688.

It was opposed to both popery and prelacy. —The Old Covenant, the New Covenant, the Jewish and Christian dispensations respectively; the designations of the two parts of the Bible, commonly called the Old and the New Testament. 2. In *her*, an animal represented with the tail hanging down, or turned up between the legs, as a lion or other beast of prey. Also *cow*. =Syn. 1. *Coward*, *Poltroon*, *Craven*, *Dastard*, *Pusillanimous* (person) express an ignoble quality of fear, or fear showing itself in dishonorable ways. *Coward* is the general word, covering the others, is most often used, and is least opprobrious. *Poltroon*, *craven*, and *dastard* are highly energetic words, used only in the effort to make a person's cowardice seem contemptible. The distinction between them is not clearly marked. A *poltroon* has somewhat more of the mean-spirited and contemptible in his character; a *craven* skulks away, accepts any means of escape, however dishonorable, from a dangerous position, duty, etc.; a *dastard* is base, and therefore despicable, in his cowardice. *Dastard* is the strongest of these words. A *pusillanimous* person is, literally, one of little courage; his cowardice is only the most conspicuous part of a general lack of force in mind and character, making him spiritless and contemptible.

I was a *coward* on instinct. *Shak.*, 1 Hen. IV., ii. 4.

Much use is made of these characters in classification.—**Coxal lines**, in *entom.*, two curved, slightly prominent lines on the first ventral abdominal segment of certain *Coleoptera*, behind the coxae. 6. Same as *cockcomb*, 2.—**Syn. 4.** *Coxcomb, Fop, Dandy, Exquisite, Beau, prig, popinjay, jacksnape.* The first five are used only of men. The distinguishing characteristic of a coxcomb is vanity, which may be displayed in regard to accomplishments, looks, dress, etc., but perhaps most often as to accomplishments. *Fop* is not quite so broad as *coxcomb*, applying chiefly to one who displays vanity in dress and pertness in conversation, with a tendency to impertinence in manner. *Dandy* is applied only to one who gives excessive attention to elegance and perhaps affectation in dress. An *exquisite* is one who prides himself upon his superfine taste in dress, manners, language, etc., when a fair judgment would be that his taste is overwrought, petty, or affected. (See quotation from *Bulwer, under exquisite*.) *Beau* is an old name for one who has too much understanding to be a mere dandy, but still overdoes in the matter of dress, sometimes carrying it to an extreme, as *Beau Nash, Beau Brummel*. *Beau Brummel* might perhaps be called the typical *fop*.

Most coxcombs are not of the laughing kind;  
More goes to make a fop than fops can find.

In Europe it is the fruit of *V. oxycoccus*, also called *bagwort*, *mossberry*, or *moorberry*, as it grows only in peat-bogs or swampy land, usually among masses of sphagnum. The berry, when ripe, is globose and dark-red, and a little more than a quarter of an inch in diameter. The berries form a sauce of fine flavor, and are much used for tarts. The same species is called in the United States the *small* cranberry, in distinction from the

A large gallatorial bird with very long legs and neck, a long straight bill with pervious nostrils near its middle, the head usually naked, at least in part, the hind toe elevated, and the inner secondaries usually enlarged; any bird of the family *Gruidae*. There are about 15 closely similar species, found in many parts of the world, most of them included in the genus *Grus*. The common crane of Europe is *G. cinerea*; it is about 4 feet long. (See cut under *Grus*.) The common American or sand-hill crane is *G. canadensis*. A statelier and larger species is the whooping crane, *G. americana*, which is white, with black primaries. The gigantic crane of Asia is *G. leucogeranus*, and a common Indian crane is *G. antigone*. The wattled crane of South Africa is *Grus (Bucconus) carunculata*. **crane**<sup>2</sup> (krān'), *n.* [A particular use of *crane*<sup>1</sup>, the arm of the contrivance being likened to the neck of a crane. A machine for moving weights, having two motions, one a direct lift and the other horizontal. The latter may be circular, radial, or universal. The parts of the simple crane are an upright post having a motion on its vertical axis, a jib or swinging arm jointed at its lower end to the post and tied to the post at its outer or upper end, and hoisting tackle connecting the motive power at the foot of the post with the load to be lifted, which is suspended from the end of the jib. Cranes are, however, made in a variety of forms, differing more or less from this type. Thus, a *rotary crane* is a crane in which the jib has simply a rotary motion about the axis of the post, moving with the post; a *traveling crane* is a crane in which the load can be given successively two horizontal motions at right angles with each other. Rotary cranes, again, have several forms, as that in which the load is suspended from the end of the

Traveling Crane.

jib, and the more complex kind, in which the load is suspended from a carriage that travels on a horizontal arm at the top of the jib, and gives the load a movement along the radius of the circle formed by the rotation of the jib. Another minor type is the *derrick-crane*, which employs guys to hold the post in position. *Walking* and *beam-type cranes* are portable forms, which are also called *traveling cranes*. Cranes are operated by any kind of power and with any form of hoisting apparatus suited to the work to be done. See also cut under *abuttant-crane*.

4. *pl. Naut.*, supports of iron or timber at a vessel's side for stowing boats or spars upon.

Some country towns of Ireland have in the market-place a crane for the weighing of goods, produce, etc. An official, popularly the *craner*, has charge of the machine, who gives a certificate of weight to all concerned, a dictum uncontrovertible. This is called the *craner's* note, and when any one makes an assertion of the "long-bow" nature, a sceptic auditor will say, "Very nice; but I should like the *craner's* note for that."
